

Digital Resource Companion

Start Here - Version 1.0

Release date	2 September 2026
Book alignment	Revised 412-page textbook
Chapters	15
Principal figures	31
Principal tables	46
Core institutional records	24

Choose the appropriate entry point

- **Website:** Open docs/index.html in the canonical edition or docs/index.html in the Reader and Practitioner edition.
- **Core tools:** Open bundles/tools/AIHE_Core_Tools_V1.0.zip or bundles/AIHE_Core_Tools_V1.0.zip for the essential forms, workbook, cases, and selected computational tools.
- **Reader and Practitioner edition:** Use the streamlined distribution for guided interaction, practical forms, workbooks, worked examples, and selected analytics.
- **Canonical source edition:** Use the full repository for editable source records, machine-readable data, computational resources, migration crosswalks, and pub assets.

Stable references

Cite chapters, sections, figures, tables, cases, and resource identifiers rather than printed page numbers. Record the resource version, release date, access date, evidence cut-off, local modifications, intervention version, accountable owner, and decision authority when a resource is used in institutional or scholarly work.

Use conditions

Worked examples and demonstration data are synthetic unless a documented source states otherwise. Replace illustrative assumptions with authorized local evidence. A completed form, workbook, model, or favourable numerical result does not establish safety, legality, effectiveness, equity, affordability, readiness, or authorization. No aggregate result overrides a mandatory safeguard.

Major V1.0 changes

- current figure and table catalogues now contain 31 principal figures and 46 principal tables;
- Chapter 12 resources now centre decision identity, decision provenance, institutional states, lifecycle triggers, material change, reauthorization, renewal, replacement, and retirement;
- the principal Chapter 15 case is now an AI-assisted remote diagnostic pathway;
- priority financial, value-of-information, procurement, quality, asset-life, circularity, rebound, and burden-transfer tools have been revised;
- the website and core-tools bundle have been regenerated from current source records.
