

Core Resource Forms

Reader and practitioner forms synchronized with the revised textbook

Release	V1.0
Release date	2026-09-02
Evidence basis	Revised textbook, 412-page edition
Active book figures	31
Active book tables	46

These resources support institutional deliberation and do not replace legal, clinical, technical, ethical, cybersecurity, procurement, quality, accreditation, or health technology assessment review.

Contents and use

Each form records a defined institutional decision, the intervention and version under consideration, the evidence cut-off, accountable ownership, conditions of use, unresolved uncertainty, and the next review. Complete only the records relevant to the decision. A favourable result in one domain cannot compensate for a failed mandatory safeguard.

ID	Resource	Primary chapter	Principal use
AIHE-A01	Decision and Use-Case Specification	1. AI as a Health-System Intervention	Define the service problem, full intervention, realistic comparators, outcomes, value mechanism, decision rule, and review cycle.
AIHE-A02	Stakeholders, Decision Rights, and Participation	1. AI as a Health-System Intervention	Identify affected parties, decision rights, participation duties, evidence contributions, and escalation authority.
AIHE-A03	Institutional Readiness Assessment	2. Institutional Readiness and Digital Foundations	Assess strategic, data, infrastructure, workflow, workforce, quality, economic, governance, procurement, and sustainability readiness.
AIHE-A04	Data Source, Provenance, and Fitness Record	2. Institutional Readiness and Digital Foundations	Document source and derived data assets, authority, definitions, transformations, quality, lineage, monitoring, and remediation.
AIHE-C04	Human Oversight and Accountability Matrix	3. Human–AI Decision Systems and Managerial Action	Assign accountability, responsibility, consultation, information, escalation, pause, update, restart, and retirement authority.
AIHE-B03	Benefit Realization and Capacity Conversion	4. Productivity, Work Redesign, and Implementation	Translate claimed benefits into measurable mechanisms, owners, baselines, conversion conditions, and realized results.

ID	Resource	Primary chapter	Principal use
AIHE-C01	AI Quality-Control and Accreditation Evidence Plan	5. Quality Management, Accreditation, and Organizational Learning	Integrate AI-enabled services into quality control, accreditation evidence, monitoring, thresholds, action, and closure.
AIHE-C02	Corrective and Preventive Action Record	5. Quality Management, Accreditation, and Organizational Learning	Document nonconformity, containment, causal analysis, corrective and preventive action, effectiveness, residual risk, and closure.
AIHE-B01	Economic Evaluation Specification	6. Lifecycle Cost, Pricing, and Benefit Realization	Define the economic decision, perspective, comparator, horizon, outcomes, costs, methods, uncertainty, safeguards, and validation.
AIHE-B02	Lifecycle Cost and Pricing Record	6. Lifecycle Cost, Pricing, and Benefit Realization	Record acquisition through exit costs, resource use, pricing exposure, opportunity cost, residual value, and evidence.
AIHE-B04	Cost-Effectiveness, Budget Impact, and HTA Record	7. Economic Evaluation, Affordability, and Health Technology Assessment	Summarize cost-effectiveness, affordability, distribution, HTA, reimbursement, adoption conditions, uncertainty, and recommendation.
AIHE-B05	Model Selection, Uncertainty, and Reproducibility	8. Decision Modelling, Simulation, and the Value of Information	Select a decision model from the problem structure and document evidence, verification, uncertainty, and reproducibility.
AIHE-D01	Vendor Evidence and Contract Requirements	9. Problem-First Procurement and Vendor Governance	Translate evidence, interoperability, data, security, monitoring, update, service, remedy, portability, and exit requirements into contract terms.
AIHE-C03	Integrated Institutional-Risk Review	10. Governance, Accountability, and	Review ethics, equity, privacy, cybersecurity,

ID	Resource	Primary chapter	Principal use
		Institutional Risk	safety, continuity, trust, legal, and economic risks as one institutional system.
AIHE-C05	Public Transparency and Communication Record	10. Governance, Accountability, and Institutional Risk	Define accurate, accessible communication about intended use, limitations, oversight, data, complaints, incidents, and alternatives.
AIHE-D02	Lifecycle Decision State, Staged Evidence, and AI-HED Status	12. Decision Architecture and Lifecycle Governance	Control increasing commitment through problem, readiness, evidence, local validation, economics, pilot, scale, renewal, and retirement gates.
AIHE-D03	Post-Deployment Monitoring and Algorithmovigilance Cadence	12. Decision Architecture and Lifecycle Governance	Define recurring and event-triggered surveillance across technical, workflow, safety, equity, economic, and contractual domains.
AIHE-D04	Incident Classification and Reconstruction	12. Decision Architecture and Lifecycle Governance	Reconstruct technical, clinical, workflow, privacy, cybersecurity, equity, communication, and economic incidents consistently.
AIHE-D05	Material Change, Reauthorization, Renewal, Replacement, and Retirement Record	12. Decision Architecture and Lifecycle Governance	Assess material changes and periodic renewal across system, data, workflow, vendor, price, law, evidence, alternatives, and exit.
AIHE-E01	Circular-Economy and Sustainable-AI Assessment	13. Circular Health Systems and Resource Stewardship	Apply the circularity hierarchy from prevention and reduction through sharing, maintenance, reuse, refurbishment, recovery, and disposal.
AIHE-E02	Circular Procurement and Supplier Scorecard	14. Circular Procurement and Asset Stewardship	Evaluate durability, modularity, repairability, interoperability,

ID	Resource	Primary chapter	Principal use
			resource information, take-back, pricing, residual value, and exit.
AIHE-E03	Supported Asset-Life Decision Record	14. Circular Procurement and Asset Stewardship	Compare maintain, refurbish, replace, and shared-service options across suitability, life, cost, resources, resilience, and disposition.
AIHE-E04	Circularity-Adjusted Evaluation Record	15. Circularity-Adjusted Economic Evaluation and Sustainable Value	Extend conventional economic evaluation with environmental, material, residual-value, resilience, equity, rebound, and burden evidence.
AIHE-E05	Environmental, Circularity, and Disposition Dashboard	15. Circularity-Adjusted Economic Evaluation and Sustainable Value	Monitor acquisition, utilization, asset life, resource intensity, materials, take-back, recovery, rebound, resilience, and disposition.

AIHE-A01 - Decision and Use-Case Specification

Chapter 1: AI as a Health-System Intervention

Define the service problem, full intervention, realistic comparators, outcomes, value mechanism, decision rule, and review cycle.

Resource version	V1.0	Release date	2026-09-02
Section	Field or question	Guidance	Response / evidence / owner
Decision definition	Service problem and measurable baseline	State the problem before selecting a product.	
Decision definition	Target population, setting, and intended users	Define scope and exclusions.	
Comparator	Best realistic AI and non-AI alternatives	Avoid an undefined or inefficient status quo.	
Complete intervention	Data, interfaces, model, thresholds, human review, workflow, capacity, governance, support, and exit	Describe the whole intervention bundle.	
Value pathway	Mechanisms linking output to decision, action, outcome, resource consequence, and public value	Separate technical potential from realized value.	
Economics	Lifecycle cost, budget incidence, opportunity cost, and distribution	Identify who pays and who benefits.	
Evidence	Evidence adequate for intended use and local context	Distinguish model evidence from intervention effects.	
Uncertainty and flexibility	Decision-critical uncertainty, threshold, option value, and reversible commitment	Specify what can be learned before scale.	
Decision conditions	Proceed, redesign, restrict, pilot, defer, replace, or retire criteria	State conditions and stopping rules.	

AIHE-A02 - Stakeholders, Decision Rights, and Participation

Chapter 1: AI as a Health-System Intervention

Identify affected parties, decision rights, participation duties, evidence contributions, and escalation authority.

Resource version	V1.0	Release date	2026-09-02
Section	Field or question	Guidance	Response / evidence / owner
Stakeholder record	Stakeholder or affected group	Include patients, staff, services, budget holders, suppliers, and public bodies.	
Stakeholder record	Interest, benefit, burden, or risk	State likely effects.	
Decision rights	Authority held and limits of delegation	Clarify approval, escalation, restriction, and stopping authority.	
Participation	How and when participation will occur	Record accessible and proportionate involvement.	
Evidence contribution	Information or expertise supplied	Name the evidence source.	
Dissent and conflict	Dissenting view or declared conflict	Preserve material disagreement.	
Escalation	Escalation route and responsible authority	Define the route before a dispute occurs.	

AIHE-A03 - Institutional Readiness Assessment

Chapter 2: Institutional Readiness and Digital Foundations

Assess strategic, data, infrastructure, workflow, workforce, quality, economic, governance, procurement, and sustainability readiness.

Resource version	V1.0	Release date	2026-09-02
Section	Field or question	Guidance	Response / evidence / owner
Use-case readiness	Application, intended use, setting, and consequence of failure	Readiness is specific to a defined use.	
Critical dependency	Source system, interface, data, infrastructure, workforce, governance, or downstream service	List dependencies individually.	
Assessment	Current adequacy and supporting evidence	Do not average critical weaknesses into a single score.	
Limitation	Unresolved limitation and consequence	State what remains uncertain.	
Response	Remediate before deployment, examine in pilot, defer, or reject	Distinguish remediable gaps from unacceptable conditions.	
Ownership	Responsible owner and completion date	Assign each action.	
Readiness decision	Proceed, conditional proceed, limited pilot, remediate, defer, or do not proceed	State conditions and next review.	

AIHE-A04 - Data Source, Provenance, and Fitness Record

Chapter 2: Institutional Readiness and Digital Foundations

Document source and derived data assets, authority, definitions, transformations, quality, lineage, monitoring, and remediation.

Resource version	V1.0	Release date	2026-09-02
Section	Field or question	Guidance	Response / evidence / owner
Data identity	Source, owner, purpose, population, time period, and version	Create a stable record of the data used.	
Provenance	Origin, collection context, transformations, mappings, and derived artefacts	Maintain lineage.	
Fitness	Completeness, accuracy, timeliness, consistency, plausibility, label validity, and stability	Assess dimensions relevant to the intended use.	
Representation	Missing or underrepresented populations and consequences	Include subgroup assessment.	
Authority	Legal and institutional basis, access conditions, minimization, and retention	Document legitimate use.	
Observability	Pipeline-health indicators, latency, interface failure, and shift monitoring	Distinguish data defects from model drift.	
Decision	Fit, conditionally fit, remediation required, or not fit	State restrictions and review triggers.	

AIHE-C04 - Human Oversight and Accountability Matrix

Chapter 3: Human–AI Decision Systems and Managerial Action

Assign accountability, responsibility, consultation, information, escalation, pause, update, restart, and retirement authority.

Resource version	V1.0	Release date	2026-09-02
Section	Field or question	Guidance	Response / evidence / owner
Decision architecture	Context and evidence available to the decision-maker	Specify what lies outside the AI output.	
Decision architecture	AI-generated signal, forecast, recommendation, or content	Record model and configuration version.	
Uncertainty	Uncertainty, deferral rule, and limits of use	Make ambiguity visible.	
Human interpretation	Required judgement, source information, and competence	Define meaningful review.	
Decision right	Accept, modify, reject, defer, escalate, or interrupt	State who may exercise each right.	
Authority	Responsible actor and escalation authority	Connect judgement with authority.	
Timing	Signal, interpretation, and action latency	Compare with the closing decision window.	
Outcome and feedback	Action, outcome, review, and learning	Close the loop.	

AIHE-B03 - Benefit Realization and Capacity Conversion

Chapter 4: Productivity, Work Redesign, and Implementation

Translate claimed benefits into measurable mechanisms, owners, baselines, conversion conditions, and realized results.

Resource version	V1.0	Release date	2026-09-02
Section	Field or question	Guidance	Response / evidence / owner
Productivity	Task and denominator	Specify per note, case, encounter, session, or paid hour.	
Productivity	Baseline and AI-assisted gross task time	Use locally observed values where possible.	
Productivity	Review, correction, coordination, support, and rework	Calculate net labour saving.	
Quality	Quality, completeness, safety, and downstream rework adjustment	Do not equate speed with productivity.	
Capacity	Fragmentation, regularity, and schedulability of released time	Determine usable capacity.	
Service system	Binding bottleneck and downstream workload	Assess service-level effects.	
Allocation	Actual destination of released capacity	Throughput, backlog, patient communication, supervision, quality work, or recovery time.	
Workforce	Work transfer, work intensity, autonomy, and skill effects	Assess distribution across professions.	
Persistence	Longitudinal effect after routine use and updates	Avoid indefinite extrapolation from a short pilot.	
Financial recognition	Cashable saving, avoided cost, revenue, or non-cash capacity benefit	Apply a stated recognition rule.	

AIHE-C01 - AI Quality-Control and Accreditation Evidence Plan

Chapter 5: Quality Management, Accreditation, and Organizational Learning

Integrate AI-enabled services into quality control, accreditation evidence, monitoring, thresholds, action, and closure.

Resource version	V1.0	Release date	2026-09-02
Section	Field or question	Guidance	Response / evidence / owner
Quality plan	Quality domain and signal	Technical, clinical, process, equity, patient experience, resource, or assurance signal.	
Surveillance	Measure, source, frequency, and method	State whether event-triggered, periodic, or statistical.	
Escalation	Acceptability threshold or escalation condition	Separate statistical control limits from managerial thresholds.	
Ownership	Named reviewer and response time	Assign responsibility.	
Triage	Immediate action, investigation, continued surveillance, or no action with rationale	Record the triage decision.	
Investigation	Evidence, causal reasoning, and affected versions	Preserve traceability.	
Response	Corrective, preventive, restrictive, or escalation action	State owner and due date.	
Verification	Effectiveness measure and observation period	Closure requires evidence.	
Learning	Procedure, control, training, or portfolio change	Prevent recurrence.	

AIHE-C02 - Corrective and Preventive Action Record

Chapter 5: Quality Management, Accreditation, and Organizational Learning

Document nonconformity, containment, causal analysis, corrective and preventive action, effectiveness, residual risk, and closure.

Resource version	V1.0	Release date	2026-09-02
Section	Field or question	Guidance	Response / evidence / owner
Problem	Incident, nonconformity, or recurring quality signal	Record affected system, version, setting, and date.	
Containment	Immediate protective action and temporary restrictions	Protect continuity and patients.	
Investigation	Root cause, contributing conditions, and evidence	Distinguish technical, workflow, human, and organizational causes.	
Corrective action	Action addressing the identified cause	Assign owner and due date.	
Preventive action	Control intended to reduce recurrence elsewhere	Apply proportionately.	
Revalidation	Evidence required after corrective change	Link to material-change review.	
Effectiveness	Measure, observation period, and result	Do not close on action completion alone.	
Closure	Closure authority, date, residual concern, and rationale	Name the accountable authority.	
Institutional learning	Changes to standards, procedures, training, monitoring, or portfolio decisions	Record recurrence prevention.	

AIHE-B01 - Economic Evaluation Specification

Chapter 6: Lifecycle Cost, Pricing, and Benefit Realization

Define the economic decision, perspective, comparator, horizon, outcomes, costs, methods, uncertainty, safeguards, and validation.

Resource version	V1.0	Release date	2026-09-02
Section	Field or question	Guidance	Response / evidence / owner
Specification	Decision problem, population, setting, and comparator	Define the economic question.	
Specification	Perspective, budget holder, time horizon, and discounting	Keep economic and financial views distinct.	
Intervention	Complete intervention and implementation assumptions	Include human and organizational components.	
Costs	Incremental resource categories and evidence sources	Include lifecycle and exit.	
Outcomes	Health, service, workforce, equity, and public-value outcomes	State observed and modelled outcomes separately.	
Method	Economic analysis and modelling approach	Match the method to the question.	
Uncertainty	Parameter, structural, methodological, implementation, and future-state uncertainty	Identify decision-critical uncertainty.	
Distribution	Distribution of costs, outcomes, and opportunity costs	Avoid reliance on averages alone.	
Decision rule	Threshold, affordability test, safeguards, and review conditions	State how evidence will inform a decision.	

AIHE-B02 - Lifecycle Cost and Pricing Record

Chapter 6: Lifecycle Cost, Pricing, and Benefit Realization

Record acquisition through exit costs, resource use, pricing exposure, opportunity cost, residual value, and evidence.

Resource version	V1.0	Release date	2026-09-02
Section	Field or question	Guidance	Response / evidence / owner
Cost and pricing	Cost item or pricing unit	Use a clinically and managerially legible unit.	
Economic view	Incremental economic resource cost	Include opportunity cost even without a cash payment.	
Cash view	Cash expenditure and payment timing	Identify the paying budget holder.	
Accounting view	Accounting expense or capitalization treatment	Record the applicable policy assumption.	
Exposure	Fixed, variable, step, volume, escalation, and minimum-commitment exposure	Model plausible use scenarios.	
Ownership	Responsible cost owner and evidence source	Assign accountability.	
Residual value	Realizable residual value and recovery cost	Avoid nominal values that cannot be obtained.	
Lifecycle decision	Renewal, renegotiation, replacement, and exit assumptions	Preserve flexibility.	

AIHE-B04 - Cost-Effectiveness, Budget Impact, and HTA Record

Chapter 7: Economic Evaluation, Affordability, and Health Technology Assessment

Summarize cost-effectiveness, affordability, distribution, HTA, reimbursement, adoption conditions, uncertainty, and recommendation.

Resource version	V1.0	Release date	2026-09-02
Section	Field or question	Guidance	Response / evidence / owner
Economic evidence	Analysis type and decision question	Separate cost-effectiveness, budget impact, affordability, HTA, reimbursement, and local adoption.	
Cost-effectiveness	Incremental costs, outcomes, ICER, efficiency frontier, and NMB	Report thresholds explicitly.	
Budget impact	Annual and cumulative cash-flow consequences	Identify the responsible budget holder and timing.	
Affordability	Implementation capacity and budget constraints	A cost-effective option may remain unaffordable.	
Transferability	Differences in population, costs, pathway, capacity, and implementation	Document adaptation from external evidence.	
Distribution	Subgroup outcomes and opportunity costs	Report equity consequences.	
Translation	HTA finding, reimbursement implication, and local decision	Do not treat these layers as interchangeable.	

AIHE-B05 - Model Selection, Uncertainty, and Reproducibility

Chapter 8: Decision Modelling, Simulation, and the Value of Information

Select a decision model from the problem structure and document evidence, verification, uncertainty, and reproducibility.

Resource version	V1.0	Release date	2026-09-02
Section	Field or question	Guidance	Response / evidence / owner
Model specification	Decision problem, conceptual model, structure, and rationale	Select structure from the dominant features of the decision.	
AI representation	Thresholds, human response, adoption, capacity, error consequences, update, and drift	Represent material AI characteristics explicitly.	
Uncertainty	Parameter, structural, methodological, implementation, and future-state uncertainty	Classify before analysis.	
Deterministic analysis	One-way sensitivity, scenarios, and threshold analysis	Identify drivers and decision boundaries.	
Probabilistic analysis	Distributions, correlations, simulation size, CE plane, CEAC, and EVPI	Document reproducibility.	
Partial information value	EVPI where the model supports it	Identify priority parameter groups.	
Research design	EVSI, research cost, implementation delay, and ENBS	Link information value to a feasible study.	
Recommendation	Proceed, collect evidence, redesign, defer, or reject	State how uncertainty changes the decision.	
Credibility	Verification, calibration, validation, transparency, and version control	Preserve model provenance.	

AIHE-D01 - Vendor Evidence and Contract Requirements

Chapter 9: Problem-First Procurement and Vendor Governance

Translate evidence, interoperability, data, security, monitoring, update, service, remedy, portability, and exit requirements into contract terms.

Resource version	V1.0	Release date	2026-09-02
Section	Field or question	Guidance	Response / evidence / owner
Supplier identity	Supplier, exact product, version, intended use, and deployment configuration	Claims must match the deployed system.	
Claim register	Clinical, technical, economic, workflow, equity, security, and sustainability claim	Treat each claim as a verifiable proposition.	
Evidence	Evidence supplied, applicability, limitations, and independent verification	Record gaps and conditions.	
Dependencies	Foundation model, cloud, data, library, device, and subcontractor dependencies	Require disclosure of upstream change.	
Rights	Data access, performance data, audit, testing, pub, and learning rights	Ensure continuing assurance.	
Obligations	Disclosure, notification, remediation, support, and reporting obligations	Assign frequency and owner.	
Commercial terms	Pricing units, volume exposure, escalation, service levels, remedies, and risk sharing	Link to lifecycle cost.	
Change control	Material-change notification and revalidation duties	Preserve version identity.	
Renewal and exit	Renewal evidence, portability, continuity, transition assistance, and termination	Treat renewal as a new decision.	

AIHE-C03 - Integrated Institutional-Risk Review

Chapter 10: Governance, Accountability, and Institutional Risk

Review ethics, equity, privacy, cybersecurity, safety, continuity, trust, legal, and economic risks as one institutional system.

Resource version	V1.0	Release date	2026-09-02
Section	Field or question	Guidance	Response / evidence / owner
Risk	Risk statement, affected groups, and plausible consequence	Cover clinical, privacy, cybersecurity, equity, trust, continuity, legal, and institutional risks.	
Evidence	Evidence source, uncertainty, and affected versions	Maintain traceability.	
Control	Preventive, detective, corrective, and continuity controls	Name owners.	
Residual risk	Residual likelihood, consequence, and uncertainty	Do not average away mandatory safeguards.	
Authority	Person or body authorized to accept residual risk	State delegation limits.	
Assurance	Independent challenge, conflict declaration, and dissent	Preserve material disagreement.	
Contestability	Route for review, complaint, appeal, or human alternative	Make it accessible.	
Lifecycle	Monitoring, incident, material-change, and reauthorization triggers	Connect risk to action.	

AIHE-C05 - Public Transparency and Communication Record

Chapter 10: Governance, Accountability, and Institutional Risk

Define accurate, accessible communication about intended use, limitations, oversight, data, complaints, incidents, and alternatives.

Resource version	V1.0	Release date	2026-09-02
Section	Field or question	Guidance	Response / evidence / owner
Communication	Purpose, audience, timing, and channel	Tailor communication to the decision context.	
Content	What the system does, intended use, benefits, risks, and alternatives	Use plain language where required.	
Evidence	Evidence strength, uncertainty, and material limitations	Avoid promotional claims.	
Rights	Human review, contest, complaint, opt-out, or alternative route	State what is available.	
Accessibility	Language, disability, literacy, and digital-access requirements	Test effective access.	
Incident and change	How material changes, incidents, restrictions, and withdrawal will be communicated	Assign responsibility.	
Approval	Accountable owner, review, pub date, and next update	Keep communications current.	

AIHE-D02 - Lifecycle Decision State, Staged Evidence, and AI-HED Status

Chapter 12: Decision Architecture and Lifecycle Governance

Control increasing commitment through problem, readiness, evidence, local validation, economics, pilot, scale, renewal, and retirement gates.

Resource version	V1.0	Release date	2026-09-02
Section	Field or question	Guidance	Response / evidence / owner
Decision identity	Intervention, product, model, configuration, data, workflow, and version	A decision must have a stable identity.	
Current state	Exploratory, retrospective evaluation, silent evaluation, pilot, conditionally authorized, authorized, restricted, suspended, replacement in progress, retired	Authorization is a current state.	
State scope	Population, setting, users, functions, exclusions, and effective date	Define the boundary of authorization.	
Conditions	Mandatory safeguards, use conditions, and unresolved uncertainty	Do not collapse specialist evidence into one score.	
Evidence status	Authoritative evidence records and evidence cut-off	Link the state to current evidence.	
Triggers	Open monitoring, incident, change, contract, cost, equity, or support triggers	State default response.	
Authority	Decision authority, dissent, conflicts, and decision date	Preserve provenance.	
Review	Next review date and evidence required	Keep the judgement current.	
History	Previous state, transition date, reason, evidence, and authority	Maintain a versioned decision history.	

AIHE-D03 - Post-Deployment Monitoring and Algorithmovigilance Cadence

Chapter 12: Decision Architecture and Lifecycle Governance

Define recurring and event-triggered surveillance across technical, workflow, safety, equity, economic, and contractual domains.

Resource version	V1.0	Release date	2026-09-02
Section	Field or question	Guidance	Response / evidence / owner
Monitoring	Signal, measure, source, affected population, and system version	Link each signal to the intervention identity.	
Cadence	Frequency, accumulation window, and review forum	Use risk-appropriate surveillance.	
Threshold	Acceptability limit or transition trigger	State statistical and decision thresholds separately.	
Ownership	Reviewer, response time, and escalation authority	Monitoring without authority is incomplete.	
Response	Continue, investigate, restrict, suspend, revalidate, reauthorize, replace, or retire	State the default response.	
Closure	Evidence required to resolve the trigger	Link to decision history.	

AIHE-D04 - Incident Classification and Reconstruction

Chapter 12: Decision Architecture and Lifecycle Governance

Reconstruct technical, clinical, workflow, privacy, cybersecurity, equity, communication, and economic incidents consistently.

Resource version	V1.0	Release date	2026-09-02
Section	Field or question	Guidance	Response / evidence / owner
Incident identity	Incident ID, date, system and version, setting, affected function and population	Preserve exact identity.	
Event	Observed event, harm, near miss, delay, or unexpected consequence	State what occurred.	
Detection	How the event was detected and initial evidence	Preserve source records.	
Decision reconstruction	AI output, source information, human interpretation, decision right, action, and timing	Reconstruct the pathway.	
Containment	Immediate restrictions, fallback, continuity, and notification	Protect ongoing service.	
Investigation	Data, model, configuration, workflow, human, vendor, and organizational contributors	Document uncertainty.	
External duty	Reportability, regulator, insurer, supplier, or affected-person notification	Verify jurisdictional duties.	
Disposition	Corrective action, revalidation, reauthorization, closure, and learning	Connect incident evidence to the lifecycle decision.	

AIHE-D05 - Material Change, Reauthorization, Renewal, Replacement, and Retirement Record

Chapter 12: Decision Architecture and Lifecycle Governance

Assess material changes and periodic renewal across system, data, workflow, vendor, price, law, evidence, alternatives, and exit.

Resource version	V1.0	Release date	2026-09-02
Section	Field or question	Guidance	Response / evidence / owner
Change identity	Change ID, previous version, proposed version, date, and requester	Maintain a controlled change record.	
Changed component	Model, data source, threshold, interface, workflow, intended use, infrastructure, supplier, price, or dependency	Identify every material component.	
Materiality	Clinical, technical, economic, equity, security, contractual, and organizational rationale	State why prior evidence may or may not remain applicable.	
Evidence impact	Evidence invalidated, weakened, unchanged, or newly required	Link to authoritative records.	
Interim state	Continue, restrict, suspend, or maintain fallback during review	Protect continuity.	
Revalidation	Testing, evaluation, assurance, and user preparation required	Assign owners and dates.	
Decision	Approve change, reject, require redesign, reauthorize, renegotiate, replace, or retire	Name the authority.	
Transition	Continuity, migration, data closure, communication, and exit plan	Control the change.	
End of authorization	Retired version, effective date, records retained, final liabilities, and closure authority	Document when authorization ends.	

AIHE-E01 - Circular-Economy and Sustainable-AI Assessment

Chapter 13: Circular Health Systems and Resource Stewardship

Apply the circularity hierarchy from prevention and reduction through sharing, maintenance, reuse, refurbishment, recovery, and disposal.

Resource version	V1.0	Release date	2026-09-02
Section	Field or question	Guidance	Response / evidence / owner
Resource system	Service function, functional unit, and system boundary	Anchor resource accounting to useful output.	
Stocks and flows	Asset or material stock, inflow, use, outflow, and destination	Use physical quantities where possible.	
Value-retention pathway	Avoid, share/intensify, maintain, repair, reuse, refurbish, remanufacture, repurpose, recycle, recover, dispose	Classify inner and outer loops.	
Circular leakage	Value or material lost between intended and realized pathway	Identify causes and controls.	
Resource intensity	Energy, water, material, hardware, transport, or service resource per functional unit	Distinguish average and marginal values.	
AI bidirectional effect	AI-enabled reduction and AI-created resource demand	Report both directions.	
Rebound	Volume growth, induced demand, or behavioural response	Test total as well as per-unit effects.	
Distribution	Spatial burden, supply-chain burden, labour, and affected communities	Avoid hidden burden shifting.	
Decision	Preferred value-retention option, safeguards, owner, and monitoring	Prioritize safe and supportable value retention.	

AIHE-E02 - Circular Procurement and Supplier Scorecard

Chapter 14: Circular Procurement and Asset Stewardship

Evaluate durability, modularity, repairability, interoperability, resource information, take-back, pricing, residual value, and exit.

Resource version	V1.0	Release date	2026-09-02
Section	Field or question	Guidance	Response / evidence / owner
Eligibility	Mandatory safety, regulatory, cybersecurity, interoperability, support, and continuity requirements	Apply before comparative scoring.	
Durability	Design life, support commitment, reliability, and warranty	Require evidence.	
Modularity and repair	Replaceable components, diagnostic access, repair documentation, tools, and parts	Assess supportability.	
Digital support	Software, firmware, model, interface, and cybersecurity support periods	Physical life alone is insufficient.	
Circular terms	Reuse, refurbishment, remanufacture, take-back, recovery, and final-destination evidence	Contract responsibilities.	
Data and exit	Portability, secure erasure, configuration export, and transition assistance	Preserve institutional choice.	
Environmental disclosure	Energy, water, material, carbon, packaging, transport, and methods	Record provenance and limits.	
Service model	Purchase, lease, managed service, shared service, or performance arrangement	Align incentives with lifecycle value.	
Award decision	Mandatory status, score, evidence confidence,	Do not let scoring compensate for failed	

	conditions, and authority	safeguards.	
--	------------------------------	-------------	--

AIHE-E03 - Supported Asset-Life Decision Record

Chapter 14: Circular Procurement and Asset Stewardship

Compare maintain, refurbish, replace, and shared-service options across suitability, life, cost, resources, resilience, and disposition.

Resource version	V1.0	Release date	2026-09-02
Section	Field or question	Guidance	Response / evidence / owner
Option identity	Maintain, repair, upgrade, refurbish, replace, share, or retire option	Define the service function.	
Eligibility before economics	Safety, performance, cybersecurity, regulatory, support, and continuity status	Exclude non-viable options before cost comparison.	
Supported service life	Years during which all required forms of support remain available	Distinguish from physical longevity.	
Condition and dependency	Asset condition, critical components, software, firmware, model, interfaces, skills, parts, and supplier dependencies	Identify bottlenecks.	
Obsolescence	Functional, technical, economic, cybersecurity, regulatory, and clinical suitability	Record material forms.	
Availability	Expected downtime, service continuity, and fallback	Include consequences of interruption.	
Economic comparison	Present value of costs, service life, equivalent annual cost, and uncertainty	Use comparable functional output.	
Residual value	Realizable residual value net of recovery cost and restrictions	Avoid nominal resale assumptions.	
Thresholds	Minimum life extension, maximum failure or downtime, and price thresholds	Define decision boundaries.	
Closure	Authorization to retire, data closure, transfer,	Complete the asset record.	

	recovery, final destination, and evidence retained		
--	--	--	--

AIHE-E04 - Circularity-Adjusted Evaluation Record

Chapter 15: Circularity-Adjusted Economic Evaluation and Sustainable Value

Extend conventional economic evaluation with environmental, material, residual-value, resilience, equity, rebound, and burden evidence.

Resource version	V1.0	Release date	2026-09-02
Section	Field or question	Guidance	Response / evidence / owner
Decision scope	Decision problem, perspective, comparators, population, and time horizon	Define the institutional decision.	
Functional equivalence	Service function and common functional unit	Compare alternatives delivering the same useful service.	
Boundaries	Economic and environmental system boundaries and differences	Reconcile before analysis.	
Resource consequences	Physical effects by lifecycle stage and evidence source	Preserve provenance.	
Average and marginal	Average footprint and marginal consequence of the decision	Do not substitute one for the other.	
Monetisation	Effect, physical unit, valuation method, monetised amount, and reason if not monetised	Keep non-monetised consequences visible.	
Residual value	Realizable economic and material residual value	Avoid double counting with avoided cost.	
Resilience	Continuity, recovery, redundancy, and supply-chain consequences	Treat as a consequence where decision-relevant.	
Double counting	Potential overlap, rule applied, and final treatment	Apply explicit accounting rules.	
Rebound and burden transfer	Induced demand, spatial transfer, intertemporal transfer, and affected groups	Report distribution.	
Uncertainty	Scenario, parameter, structural, and valuation uncertainty	Test preference reversal.	

Decision	Disaggregated results, safeguards, preferred option, and rationale	Do not force complete monetisation.	
----------	--	-------------------------------------	--

AIHE-E05 - Environmental, Circularity, and Disposition Dashboard

Chapter 15: Circularity-Adjusted Economic Evaluation and Sustainable Value

Monitor acquisition, utilization, asset life, resource intensity, materials, take-back, recovery, rebound, resilience, and disposition.

Resource version	V1.0	Release date	2026-09-02
Section	Field or question	Guidance	Response / evidence / owner
Indicator	Indicator name, definition, functional unit, and purpose	Use a decision-relevant denominator.	
Measurement	Baseline, current value, target, period, and data source	Preserve evidence provenance.	
Interpretation	Average or marginal measure, uncertainty, and limitations	Avoid false precision.	
Value-retention	Stock, flow, inner/outer loop, leakage, and disposition	Track physical consequences.	
Rebound	Volume, utilization, induced demand, and total-resource effect	Monitor total as well as per-unit performance.	
Distribution	Location, supplier, community, and time period bearing the consequence	Reveal burden transfer.	
Ownership	Named owner, threshold, response, and next review	Connect measurement to action.
