Evidence, Value, Governance, and Lifecycle Decision-Making

Digital Resource Companion

Consolidated Core Resource Forms

Muthana Zouri

Carmen Marinela Cumpăt

Grigore T. Popa University of Medicine and Pharmacy Publishing House

V1.0 · 16 September 2026

Using the core forms

This volume brings together the nineteen core institutional records aligned with Chapters 1–12. Select records according to the decision, consequence, uncertainty, scale, reversibility, and institutional dependence; the collection is not a mandatory checklist.

- Begin with the service problem, population, setting, accountable decision-maker, and realistic comparator.
- Create a governed local copy. Preserve the resource identifier, package version, evidence cut-off, intervention identity, owner, and record of local changes.
- Replace synthetic or illustrative material with authorized, versioned local evidence. Keep unknowns, disagreements, assumptions, and limitations explicit.
- Record the current institutional decision state, conditions, mandatory safeguards, monitoring thresholds, transition triggers, accountable authority, next review, and credible exit route.
- Do not enter identifiable patient information, credentials, private keys, confidential contracts, or restricted institutional information into uncontrolled copies.

These author-developed records support education, structured analysis, documentation, and institutional deliberation. A completed form does not establish safety, legality, effectiveness, equity, affordability, readiness, or authorization, and no favourable result can offset an unacceptable mandatory safeguard.

Resource index

Resource	Institutional record	Primary chapter
AIHE-A01	Decision and Use-Case Specification	1 — AI as a Health System Intervention
AIHE-A02	Stakeholders, Decision Rights, and Participation	1 — AI as a Health System Intervention
AIHE-A03	Institutional Readiness Assessment	2 — Institutional Readiness and Digital Foundations
AIHE-A04	Data Source, Provenance, and Fitness Record	2 — Institutional Readiness and Digital Foundations
AIHE-C04	Human Oversight and Accountability Matrix	3 — Human–AI Decision Systems and Managerial Action
AIHE-B03	Benefit Realization and Capacity Conversion	4 — Productivity, Work Redesign, and Implementation
AIHE-C01	AI Quality-Control and Accreditation Evidence Plan	5 — Quality Management, Accreditation, and Organizational Learning

Resource	Institutional record	Primary chapter
AIHE-C02	Corrective and Preventive Action Record	5 — Quality Management, Accreditation, and Organizational Learning
AIHE-B01	Economic Evaluation Specification	6 — Lifecycle Cost, Pricing, and Benefit Realization
AIHE-B02	Lifecycle Cost and Pricing Record	6 — Lifecycle Cost, Pricing, and Benefit Realization
AIHE-B04	Cost-Effectiveness, Budget Impact, and HTA Record	7 — Economic Evaluation, Affordability, and Health Technology Assessment
AIHE-B05	Model Selection, Uncertainty, and Reproducibility	8 — Decision Modelling, Simulation, and the Value of Information
AIHE-D01	Vendor Evidence and Contract Requirements	9 — Problem-First Procurement and Vendor Governance
AIHE-C03	Integrated Institutional-Risk Review	10 — Governance, Accountability, and Institutional Risk
AIHE-C05	Public Transparency and Communication Record	10 — Governance, Accountability, and Institutional Risk
AIHE-D02	Lifecycle Decision State, Staged Evidence, and AI-HED Status	12 — Decision Architecture and Lifecycle Governance
AIHE-D03	Post-Deployment Monitoring and Algorithmovigilance Cadence	12 — Decision Architecture and Lifecycle Governance
AIHE-D04	Incident Classification and Reconstruction	12 — Decision Architecture and Lifecycle Governance
AIHE-D05	Material Change, Reauthorization, Renewal, Replacement, and Retirement Record	12 — Decision Architecture and Lifecycle Governance

AIHE-A01 — Decision and Use-Case Specification

Chapter 1: AI as a Health System Intervention

Define the service problem, full intervention, realistic comparators, outcomes, value mechanism, decision rule, and review cycle.

Resource: AIHE-A01 | V1.0 | Aligned chapters: 1, 2, 3

Complete the record with the people who own the evidence, workflow, budget, safeguards, and follow-up action. Distinguish documented evidence from assumptions and planned evidence collection. Record the exact intervention and version, accountable owner, decision conditions, evidence cut-off, review date, and trigger events.

Field	Guidance	Institutional response
Service problem and baseline burden	Describe the unmet clinical, operational, workforce, quality, accreditation, or public-health need using measurable baseline evidence.	
Population and setting	Define included and excluded populations, services, locations, and time periods.	
AI-enabled intervention	Describe the complete intervention bundle: data, model, interfaces, thresholds, users, review, workflow, downstream action, monitoring, support, and exit.	
Realistic comparators	Record current practice, process redesign, staffing, equipment, conventional digital tools, alternative AI, shared service, and no-change options where relevant.	
Decision-maker and perspective	Identify the authority making the decision and the hospital, health-system, payer, patient, societal, or combined perspective.	
Primary and balancing outcomes	Define clinical, operational, quality, accreditation, workforce, economic, equity, trust, and safety outcomes.	
Time horizon and decision window	State the analytic horizon and the time within which an output must lead to action.	

Field	Guidance	Institutional response
Value mechanism	Explain how the intervention is expected to change a decision, action, outcome, resource consequence, and public value.	
Decision rule	Define proceed, redesign, silent validation, pilot, conditional adoption, scale, restrict, pause, replace, or retire criteria.	
Evidence cut-off and next review	Record the last evidence date, responsible reviewer, planned review date, and trigger events.	

Local record control: owner _____ evidence cut-off _____ next review _____ local version _____

AIHE-A02 — Stakeholders, Decision Rights, and Participation

Chapter 1: AI as a Health System Intervention

Identify affected parties, decision rights, participation duties, evidence contributions, and escalation authority.

Resource: AIHE-A02 | V1.0 | Aligned chapters: 1, 3, 10, 12

Complete the record with the people who own the evidence, workflow, budget, safeguards, and follow-up action. Distinguish documented evidence from assumptions and planned evidence collection. Record the exact intervention and version, accountable owner, decision conditions, evidence cut-off, review date, and trigger events.

Role or group	Interest or potential effect	Decision duty	Participation, evidence, or action required
Board or executive sponsor	Strategy, public accountability, resources, and risk appetite	Approve material commitment and named accountability	
Clinical and operational leads	Safety, workflow, professional practice, and service capacity	Specify intended use, action, fallback, and clinical acceptance	
Quality and accreditation leads	Standards, controls, evidence, incidents, and improvement	Integrate the intervention into quality-management and accreditation processes	
Health economics, finance, payer, or HTA	Cost, outcomes, affordability, opportunity cost, reimbursement, and value	Approve economic methods, assumptions, and budget consequences	
Data, informatics, IT, and cybersecurity	Data fitness, interoperability, architecture, security, resilience, and monitoring	Verify technical readiness and continuing operability	

Role or group	Interest or potential effect	Decision duty	Participation, evidence, or action required
Ethics, privacy, legal, and compliance	Rights, lawful use, fairness, contestability, and obligations	Define mandatory safeguards and unresolved legal or ethical conditions	
Procurement and contract management	Evidence, price, service levels, updates, remedies, portability, and exit	Translate requirements into enforceable terms	
Patients, public, and workforce representatives	Access, experience, acceptability, trust, burden, and group effects	Contribute priorities, communication requirements, and challenge	

Local record control: owner _____ evidence cut-off _____ next review _____ local version _____

AIHE-A03 — Institutional Readiness Assessment

Chapter 2: Institutional Readiness and Digital Foundations

Assess strategic, data, infrastructure, workflow, workforce, quality, economic, governance, procurement, and continuing support readiness.

Resource: AIHE-A03 | V1.0 | Aligned chapters: 2, 4, 5, 9, 10, 12

Assess each domain separately as Ready, Remediation required, Uncertain, or Not applicable, supported by evidence and a named owner. Do not infer overall readiness from an average or allow a favourable finding to offset a mandatory safeguard.

Domain	Assessment question	Status	Evidence, gap, prerequisite, and owner
Strategic alignment	Is the problem linked to documented health-system priorities and realistic alternatives?		
Data fitness	Are required data lawful, available, timely, representative, traceable, and sustainable?		
Interoperability	Can inputs and outputs be exchanged and interpreted consistently within the decision window?		
Infrastructure and resilience	Are identity, access, compute, storage, interfaces, logging, fallback, and recovery adequate?		
Workflow and downstream capacity	Can users interpret the output and take the intended action without shifting unsafe burden?		
Workforce capability	Are roles, training, competency, supervision, and professional responsibilities defined?		
Quality and accreditation	Are controls, indicators, evidence, incident processes, and improvement responsibilities integrated?		
Economics and affordability	Are lifecycle costs, resource constraints, benefits, uncertainty, and budget exposure understood?		

Domain	Assessment question	Status	Evidence, gap, prerequisite, and owner
Governance and assurance	Are decision rights, safeguards, independent review, monitoring, and authority to stop defined?		
Procurement and vendor readiness	Can evidence, audit, updates, data rights, support, pricing, portability, and exit be contracted?		
Continuing support and service sustainability	Are support, maintenance, infrastructure dependencies, continuity, replacement, residual value, and exit considered where material?		

Local record control: owner _____ evidence cut-off _____ next review _____ local version _____

AIHE-A04 — Data Source, Provenance, and Fitness Record

Chapter 2: Institutional Readiness and Digital Foundations

Document source and derived data assets, authority, definitions, transformations, quality, lineage, monitoring, and remediation.

Resource: AIHE-A04 | V1.0 | Aligned chapters: 2, 8, 11, 12

Complete the record with the people who own the evidence, workflow, budget, safeguards, and follow-up action. Distinguish documented evidence from assumptions and planned evidence collection. Record the exact intervention and version, accountable owner, decision conditions, evidence cut-off, review date, and trigger events.

Source or derived asset	Purpose and required timing	Authority and steward	Definition, units, and transformations	Completeness, plausibility, and representativeness	Lineage, version, and monitoring	Risk, remediation, and decision

Local record control: owner _____ evidence cut-off _____ next review _____ local version _____

AIHE-C04 — Human Oversight and Accountability Matrix

Chapter 3: Human–AI Decision Systems and Managerial Action

Assign accountability, responsibility, consultation, information, escalation, pause, update, restart, and retirement authority.

Resource: AIHE-C04 | V1.0 | Aligned chapters: 3, 10, 12

Complete the record with the people who own the evidence, workflow, budget, safeguards, and follow-up action. Distinguish documented evidence from assumptions and planned evidence collection. Record the exact intervention and version, accountable owner, decision conditions, evidence cut-off, review date, and trigger events.

Activity	Executive	Clinical	Quality	Data/IT	Economics	Ethics/risk	Procurement vendor
Define problem, comparator, and intended use							
Assess evidence, data, and local validity							
Conduct economic and affordability analysis							
Approve procurement, contract, and pilot							
Operate, review, override, and escalate							
Investigate incidents and corrective action							
Approve material change or expansion							
Renew, restrict, replace, pause, restart, or retire							

Local record control: owner _____ evidence cut-off _____ next review _____ local version _____

AIHE-B03 — Benefit Realization and Capacity Conversion

Chapter 4: Productivity, Work Redesign, and Implementation

Translate claimed benefits into measurable mechanisms, owners, baselines, conversion conditions, and realized results.

Resource: AIHE-B03 | V1.0 | Aligned chapters: 4, 6, 7, 12

Complete the record with the people who own the evidence, workflow, budget, safeguards, and follow-up action. Distinguish documented evidence from assumptions and planned evidence collection. Record the exact intervention and version, accountable owner, decision conditions, evidence cut-off, review date, and trigger events.

Claimed benefit and comparator	Causal mechanism, affected workflow, and distribution	Measure, baseline, evidence, and attribution	Owner, timing, and capacity-allocation decision	Review burden, conversion condition, realized result, and financial treatment

Local record control: owner _____ evidence cut-off _____ next review _____ local version _____

AIHE-C01 — AI Quality-Control and Accreditation Evidence Plan

Chapter 5: Quality Management, Accreditation, and Organizational Learning

Integrate AI-enabled services into quality control, accreditation evidence, monitoring, thresholds, action, and closure.

Resource: AIHE-C01 | V1.0 | Aligned chapters: 5, 10, 11, 12

Complete the record with the people who own the evidence, workflow, budget, safeguards, and follow-up action. Distinguish documented evidence from assumptions and planned evidence collection. Record the exact intervention and version, accountable owner, decision conditions, evidence cut-off, review date, and trigger events.

Quality domain or requirement	Signal, measure, definition, and source	System, data, and workflow version	Review frequency, reviewer, and triage rule	Control, clinical, or institutional threshold	Escalation, investigation, and corrective action	Effectiveness verification, closure authority, and learning
Technical reliability						
Model and human–AI performance						
Clinical safety and outcome						
Workflow and professional practice						
Patient experience and communication						
Equity and access						
Economic and resource value						
Governance and documentation						

Local record control: owner _____ evidence cut-off _____ next review _____ local version _____

AIHE-C02 — Corrective and Preventive Action Record

Chapter 5: Quality Management, Accreditation, and Organizational Learning

Document nonconformity, containment, causal analysis, corrective and preventive action, effectiveness, residual risk, and closure.

Resource: AIHE-C02 | V1.0 | Aligned chapters: 5, 10, 12

Complete the record with the people who own the evidence, workflow, budget, safeguards, and follow-up action. Distinguish documented evidence from assumptions and planned evidence collection. Record the exact intervention and version, accountable owner, decision conditions, evidence cut-off, review date, and trigger events.

Field	Guidance	Institutional response
Signal, triage, and scope	Describe the indicator, incident, complaint, audit finding, accreditation gap, threshold breach, affected system or version, and triage decision.	
Immediate containment	Record protections for patients, staff, data, service continuity, and evidence, including restriction, rollback, or pause.	
Reconstruction and evidence preservation	Preserve the data state, model, software and configuration version, output, human action, timing, workload, communication, and context.	
Causal analysis	Identify confirmed and competing technical, clinical, workflow, organizational, supplier, contractual, and governance causes.	
Corrective action	Define the action, accountable owner, due date, revalidation, communication, supplier response, and implication for the current decision state.	
Preventive and recurrence-control action	Identify surveillance, training, documentation, contract, design, and portfolio controls intended to prevent recurrence.	
Effectiveness verification	Define the evidence, observation period, threshold, reviewer, residual uncertainty, and basis for deciding whether the action worked.	
Closure and institutional learning	Record closure authority, decision, dissent, residual risk, next review, lessons, and changes to related systems or policies.	

Local record control: owner _____ evidence cut-off _____ next review _____ local version _____

AIHE-B01 — Economic Evaluation Specification

Chapter 6: Lifecycle Cost, Pricing, and Benefit Realization

Define the economic decision, perspective, comparator, horizon, outcomes, costs, methods, uncertainty, safeguards, and validation.

Resource: AIHE-B01 | V1.0 | Aligned chapters: 6, 7, 8

Complete the record with the people who own the evidence, workflow, budget, safeguards, and follow-up action. Distinguish documented evidence from assumptions and planned evidence collection. Record the exact intervention and version, accountable owner, decision conditions, evidence cut-off, review date, and trigger events.

Field	Guidance	Institutional response
Decision and comparator	State the incremental decision and all realistic alternatives.	
Population, setting, and subgroups	Define eligible volume, uptake, important heterogeneity, and access constraints.	
Perspective and budget holder	Distinguish hospital, payer, patient, societal, and service perspectives and identify who pays and benefits.	
Time horizon, cycle, and discounting	Justify duration, timing of implementation, useful life, updating, residual value, and discount rates.	
Outcome hierarchy	Separate final health outcomes, intermediate outcomes, process measures, workforce effects, quality, equity, trust, and service effects.	
Cost boundary	Include acquisition, data, integration, infrastructure, training, review, governance, monitoring, incidents, updates, support, opportunity cost, and exit where incremental.	
Analytic approach	Specify cost-consequence, cost-effectiveness, cost-utility, cost-benefit, budget impact, ROI, multi-criteria, or combined analysis.	
Uncertainty and heterogeneity	Define deterministic, probabilistic, scenario, threshold, structural, subgroup, and value-of-information analyses.	

Field	Guidance	Institutional response
Decision rule and safeguards	State willingness-to-pay or net-benefit rule, affordability threshold, mandatory safeguards, and conditions.	
Reporting and validation	Record model version, evidence date, technical verification, face validity, external review, reproducibility, and archive location.	

Local record control: owner _____ evidence cut-off _____ next review _____ local version _____

AIHE-B02 — Lifecycle Cost and Pricing Record

Chapter 6: Lifecycle Cost, Pricing, and Benefit Realization

Record acquisition through exit costs, resource use, pricing exposure, opportunity cost, residual value, and evidence.

Resource: AIHE-B02 | V1.0 | Aligned chapters: 6, 9, 12

Keep economic resource cost, cash expenditure, and accounting expense separate. Where physical assets are material, record supported service life, maintenance, replacement timing, and realizable residual value net of recovery costs (book §§6.2.3–6.2.4).

Lifecycle layer	Resource or pricing unit	Quantity	Economic cost	Cash expenditure	Accounting expense	Budget owner or incidence	Timing or scenario	Evidence, assumptions, and notes
Acquisition, licence, and initial commitment								
Data preparation, governance, and access								
Integration, infrastructure, and interoperability								
Validation, assurance, and implementation								
Training, workflow redesign, and human review								
Quality, ethics, legal, privacy, and audit								
Cybersecurity, resilience, downtime, and incidents								

Lifecycle layer	Resource or pricing unit	Quantity	Economic cost	Cash expenditure	Accounting expense	Budget owner or incidence	Timing or scenario	Evidence, assumptions, and notes
Monitoring, updates, support, and renewal								
Opportunity cost and displaced or released capacity								
Transition, replacement, retirement, and exit								
Realizable residual value or recovery credit								

Local record control: owner _____ evidence cut-off _____ next review _____ local version _____

AIHE-B04 — Cost-Effectiveness, Budget Impact, and HTA Record

Chapter 7: Economic Evaluation, Affordability, and Health Technology Assessment

Summarize cost-effectiveness, affordability, distribution, HTA, reimbursement, adoption conditions, uncertainty, and recommendation.

Resource: AIHE-B04 | V1.0 | Aligned chapters: 7, 8, 9, 11

Complete the record with the people who own the evidence, workflow, budget, safeguards, and follow-up action. Distinguish documented evidence from assumptions and planned evidence collection. Record the exact intervention and version, accountable owner, decision conditions, evidence cut-off, review date, and trigger events.

Field	Guidance	Institutional response
Incremental cost and outcome	Report disaggregated and summary results relative to the comparator.	
ICER or net benefit	State the threshold, currency and price year, and probability that the preferred option is cost-effective.	
Budget impact	Report eligible volume, uptake, implementation timing, annual cash flow, funding source, and cashable versus non-cashable savings.	
Distribution and equity	Report subgroup outcomes, access, burdens, opportunity costs, mitigation, and residual concern.	
Regulatory and clinical evidence status	Distinguish authorization, external clinical evidence, joint or national assessment, and local evidence.	
Reimbursement and payment	Identify coverage, coding, tariff, payer, claim, denial, and incentive implications.	
Local adoption conditions	Record readiness, procurement, workforce, quality, accreditation, governance, and monitoring prerequisites.	
Uncertainty and additional evidence	Identify parameters that may change the decision and the value, cost, and timing of further research.	

Field	Guidance	Institutional response
Recommendation	Record adopt, pilot, conditional use, restrict, defer, redesign, reject, or retire, together with conditions and review date.	

Local record control: owner _____ evidence cut-off _____ next review _____ local version _____

AIHE-B05 — Model Selection, Uncertainty, and Reproducibility

Chapter 8: Decision Modelling, Simulation, and the Value of Information

Select a decision model from the problem structure and document evidence, verification, uncertainty, and reproducibility.

Resource: AIHE-B05 | V1.0 | Aligned chapters: 8, 11

Complete the record with the people who own the evidence, workflow, budget, safeguards, and follow-up action. Distinguish documented evidence from assumptions and planned evidence collection. Record the exact intervention and version, accountable owner, decision conditions, evidence cut-off, review date, and trigger events.

Decision or uncertainty feature	Appropriate analytical response	Critical evidence and assumptions	Verification, validation, research-value, and reproducibility record
Short, non-recurring pathway	Decision tree	Branches, probabilities, costs, outcomes, thresholds, and downstream action	Logic review, extreme-value tests, deterministic and probabilistic analysis
Recurring health states	Cohort state-transition model	Transitions, time dependence, utilities, costs, competing events, and intervention effects	Trace validation, cycle and horizon tests, calibration, and structural alternatives
Individual heterogeneity and history	Microsimulation	Patient-level distributions, correlations, histories, subgroup effects, and treatment rules	Seeds, replications, convergence, internal and external validation, and subgroup checks
Queues, capacity, and event timing	Discrete-event simulation	Arrivals, service times, routing, capacity, prioritization, downtime, and response constraints	Event-trace review, warm-up, run length, replications, and stress tests

Decision or uncertainty feature	Appropriate analytical response	Critical evidence and assumptions	Verification, validation, research-value, and reproducibility record
Interacting actors, behaviours, or feedback	Agent-based, system-dynamics, or hybrid model	Behaviour rules, networks, stocks, flows, delays, adaptation, and policy feedback	Pattern validation, rule sensitivity, alternative structures, and face validity
AI-specific characteristics and uncertainty	Explicit model features, scenarios, and value-of-information analysis	Thresholds, calibration, drift, abstention, review burden, updating, version change, implementation, and evidence cost	EVPI, EVPPI, EVSI or ENBS where justified; version-matched evidence; test suite; provenance; decision traceability

Local record control: owner _____ evidence cut-off _____ next review _____ local version _____

AIHE-D01 — Vendor Evidence and Contract Requirements

Chapter 9: Problem-First Procurement and Vendor Governance

Translate evidence, interoperability, data, security, monitoring, update, service, remedy, portability, and exit requirements into contract terms.

Resource: AIHE-D01 | V1.0 | Aligned chapters: 6, 9, 10, 12

Apply mandatory eligibility requirements before comparative scoring. Include continuing supplier disclosure, maintenance and support end dates, audit rights, material-change control, portability, continuity, and a credible exit route (book §§9.3–9.7).

Requirement	Evidence or clause requested	Independent and local verification	Risk if absent or incorrect	Remedy and exit position	Owner and status
Exact supplier, product, model, configuration, intended and excluded use, population, and version					
Clinical, technical, human-factors, implementation, and economic evidence					
Upstream model, cloud, data, component, subprocessor, and infrastructure dependencies					
Interoperability, data quality, provenance, access, export, and portability					

Requirement	Evidence or clause requested	Independent and local verification	Risk if absent or incorrect	Remedy and exit position	Owner and status
Privacy, cybersecurity, resilience, continuity, incidents, and recovery					
Pricing units, volume exposure, integration, support, escalation, and auditability					
Continuing disclosure, change notification, validation, approval, rollback, and release control					
Monitoring data, logs, evidence access, audit rights, and assurance cooperation					
Service levels, downtime, fallback, support, remedies, liability, renewal, termination, and exit					

Local record control: owner _____ evidence cut-off _____ next review _____ local version _____

AIHE-C03 — Integrated Institutional-Risk Review

Chapter 10: Governance, Accountability, and Institutional Risk

Review ethics, equity, privacy, cybersecurity, safety, continuity, trust, legal, and economic risks as one institutional system.

Resource: AIHE-C03 | V1.0 | Aligned chapters: 10, 12

Complete the record with the people who own the evidence, workflow, budget, safeguards, and follow-up action. Distinguish documented evidence from assumptions and planned evidence collection. Record the exact intervention and version, accountable owner, decision conditions, evidence cut-off, review date, and trigger events.

Domain	Question and evidence	Status and residual risk	Safeguard, owner, action, and review
Autonomy and contestability	Are people informed appropriately, able to question consequential use, and offered a human route where required?		
Safety and effectiveness	Are intended use, limitations, local performance, workflow controls, and fallback acceptable?		
Equity and inclusion	Are data, performance, access, outcomes, and burdens assessed across relevant groups?		
Privacy and lawful data use	Are purpose, necessity, minimization, authority, retention, access, and secondary use governed?		
Cybersecurity and resilience	Are threat, supplier, integration, logging, incident, downtime, recovery, and continuity controls adequate?		
Transparency and trust	Are evidence, uncertainty, limitations, responsibilities, incidents, and communication credible and accessible?		
Accountability and oversight	Are decision rights, review workload, escalation, pause, update, restart, renewal, and retirement authority explicit?		

Local record control: owner _____ evidence cut-off _____ next review _____ local version _____

AIHE-C05 — Public Transparency and Communication Record

Chapter 10: Governance, Accountability, and Institutional Risk

Define accurate, accessible communication about intended use, limitations, oversight, data, complaints, incidents, and alternatives.

Resource: AIHE-C05 | V1.0 | Aligned chapters: 3, 10, 12

Complete the record with the people who own the evidence, workflow, budget, safeguards, and follow-up action. Distinguish documented evidence from assumptions and planned evidence collection. Record the exact intervention and version, accountable owner, decision conditions, evidence cut-off, review date, and trigger events.

Communication element	Approved content, channel, owner, and review
Purpose and intended use	
What the system does and does not do	
Role of human review and accountability	
Data use, privacy, retention, and external providers	
Known limitations, uncertainty, and subgroup concerns	
Accessibility, language, disability, and non-digital alternatives	
Questions, complaints, contestability, and incident communication	
Material changes, suspension, and retirement	

Local record control: owner _____ evidence cut-off _____ next review _____ local version _____

AIHE-D02 — Lifecycle Decision State, Staged Evidence, and AI-HED Status

Chapter 12: Decision Architecture and Lifecycle Governance

Record the current institutional decision state, exact intervention identity, scope, evidence, conditions, safeguards, triggers, authority, history, and next review.

Resource: AIHE-D02 | V1.0 | Aligned chapters: 4, 9, 11, 12

Use the institutional decision states in Table 12.3. A permission state describes what the institution presently permits; silent evaluation, a pilot, and implementation milestones do not themselves constitute authorization. Link every transition to evidence, accountable authority, scope, conditions, and date.

Decision-provenance element	Required evidence or record	Current status or state	Condition, safeguard, trigger, or unresolved matter	Accountable authority, date, and next review
Decision identity	Intervention, supplier, model, configuration, data, workflow, intended use, population, setting, comparator, and version			
Current institutional decision state	Under consideration; Evaluation authorized; Conditional use; Authorized use; Restricted use; Paused or suspended; Retired or superseded			
Implementation activity (separate from permission)	Record retrospective testing, silent evaluation, pilot, rollout, or another implementation activity without treating it as the institutional decision state.			
Scope and effective date	Authorized population, setting, users, functions, exclusions, start date, and expiry or review point			

Decision-provenance element	Required evidence or record	Current status or state	Condition, safeguard, trigger, or unresolved matter	Accountable authority, date, and next review
Evidence basis and cut-off	Version-matched technical, clinical, causal, economic, implementation, governance, quality, and contractual evidence			
Mandatory safeguards and conditions	Non-compensatory safety, equity, privacy, cybersecurity, human-oversight, continuity, and legal conditions			
Unresolved uncertainty and monitoring	Decision-critical uncertainty, signals, thresholds, owners, review cadence, and evidence-development commitments			
Transition and material-change triggers	Incidents, drift, changed data, model, workflow or intended use; supplier notice; price; support; law; capacity; evidence; or comparator			
Decision history and next review	Previous states, reasons for transitions, dissent, conditions, accountable authority, effective date, and next review			

Local record control: owner _____ evidence cut-off _____ next review _____ local version _____

AIHE-D03 — Post-Deployment Monitoring and Algorithmic vigilance Cadence

Chapter 12: Decision Architecture and Lifecycle Governance

Define recurring and event-triggered surveillance across technical, workflow, safety, equity, economic, and contractual domains.

Resource: AIHE-D03 | V1.0 | Aligned chapters: 5, 11, 12

The cadences below are illustrative. Set local review frequency in proportion to consequence, uncertainty, rate of change, scale, reversibility, and institutional dependence. Scheduled review does not replace event-triggered reconsideration (book §12.4.1).

Frequency	Purpose	Minimum review content	Owner or forum
Continuous or daily	Technical integrity and immediate service protection	Availability, latency, interfaces, input completeness, deployed version, logging, cybersecurity alerts, and fallback	Technical operations and service owner
Weekly during pilots or high-consequence use	Workflow and operational review	Output volume, action, overrides, delays, workarounds, review burden, near misses, and downstream capacity	Clinical and operational leads
Monthly	Multidisciplinary safety and performance review	Technical and human–AI performance, outcomes, complaints, incidents, vendor notices, training, and corrective actions	Quality and AI-governance forum
Quarterly or semi-annually	Distributional, workforce, and economic review	Subgroups, access, workload, adoption, lifecycle cost, benefit realization, budget impact, equity, and trust	Economics, quality, equity, workforce, and governance leads

Frequency	Purpose	Minimum review content	Owner or forum
Annually	Formal renewal, restriction, replacement, or retirement	Current intended use, evidence, value, residual risk, contract, updates, alternatives, monitoring capacity, and exit readiness	Executive decision authority
Event triggered	Material change or serious incident review	Model, data, threshold, interface, workflow, vendor, security, policy, population, price, or serious performance change	Named incident or change authority

Local record control: owner _____ evidence cut-off _____ next review _____ local version _____

AIHE-D04 — Incident Classification and Reconstruction

Chapter 12: Decision Architecture and Lifecycle Governance

Reconstruct technical, clinical, workflow, privacy, cybersecurity, equity, communication, and economic incidents consistently.

Resource: AIHE-D04 | V1.0 | Aligned chapters: 5, 10, 11, 12

Complete the record with the people who own the evidence, workflow, budget, safeguards, and follow-up action. Distinguish documented evidence from assumptions and planned evidence collection. Record the exact intervention and version, accountable owner, decision conditions, evidence cut-off, review date, and trigger events.

Field	Guidance	Institutional response
Event, detection, and category	Describe the event or pattern, who detected it, and how it was classified.	
Data and provenance	Preserve available data, source, timestamp, transformation, missingness, quality state, and recent source changes.	
System and configuration	Record model, software, threshold, interface, prompt, template, retrieval, knowledge source, and hosting versions.	
AI output and uncertainty	Preserve score, classification, recommendation, generated content, alert, action, explanation, and uncertainty.	
Human action and decision context	Record recipient, information available, accept, reject, modify, ignore, escalation, rationale, workload, staffing, patient condition, and capacity.	
Immediate response	Record patient and service protection, containment, notification, restriction, pause, rollback, and fallback.	
Causal analysis and residual uncertainty	Distinguish confirmed, contributing, and unresolved technical, clinical, workflow, organizational, and governance causes.	
Corrective and preventive action	Record action, owner, deadline, revalidation, communication, vendor or contract response, monitoring change, and effectiveness check.	

Field	Guidance	Institutional response
Closure and learning	Record closure authority, evidence, affected records and people, residual risk, recurrence prevention, and portfolio implications.	

Local record control: owner _____ evidence cut-off _____ next review _____ local version _____

AIHE-D05 — Material Change, Reauthorization, Renewal, Replacement, and Retirement Record

Chapter 12: Decision Architecture and Lifecycle Governance

Assess material change, revalidation, current authorization, renewal, renegotiation, replacement, retirement, continuity, and the end of authorization.

Resource: AIHE-D05 | V1.0 | Aligned chapters: 9, 11, 12

Renewal is a new decision against current evidence and alternatives. A technical update or interface shutdown does not by itself constitute reauthorization or retirement. Document continuity, records, communication, support, contractual closure, and the end of authorization (book §§12.4–12.5).

Field	Guidance	Institutional response
Change or review trigger	Model, data source, threshold, interface, workflow, intended use, population, hosting, infrastructure, supplier, upstream dependency, pricing, support, law, evidence, or comparator.	
Previous and proposed identity	Record the system, model, configuration, data, workflow, supplier, intended use, and versions before and after the change.	
Materiality and immediate control	Assess effects on behaviour, performance, risk, user interaction, resource use, evidence, and obligations; record restriction, rollback, silent mode, pause, or continuity control.	
Evidence and dossier elements affected	Identify validation, causal, economic, implementation, quality, equity, governance, contract, training, communication, monitoring, and AI-HED records requiring revision.	
Revalidation and reauthorization plan	Define tests, subgroups, human factors, acceptance thresholds, pilot or silent evaluation, accountable reviewers, approval route, and release plan.	
Current value, affordability, and alternatives	Reassess lifecycle cost, benefit realization, budget incidence, price, supported life, risk, opportunity cost, replacement, and credible alternatives.	

Field	Guidance	Institutional response
Lifecycle decision	Continue unchanged; continue with conditions; modify; restrict; suspend; reauthorize; renew; renegotiate; replace; or retire.	
Continuity, closure, and next review	Record fallback, data export, retention or deletion, workflow transition, communication, contract closure, asset disposition, end of authorization, authority, date, and next trigger.	

Local record control: owner _____ evidence cut-off _____ next review _____ local version _____
