

Artificial Intelligence and Healthcare Economics

Evidence, Value, Governance, and Sustainability

Digital Resource Companion

Consolidated Core Resource Forms

Muthana Zouri

Carmen Marinela Cumpăt

Grigore T. Popa University of Medicine and Pharmacy Publishing House

V1.0 | 2026

How to Use This Volume

This volume brings together the twenty-four core institutional records in a consistent, printable, and editable format. It is intended for committees, project teams, institutional review groups, educators, and controlled offline work. The individual resource folders in the Digital Resource Companion remain the source for resource-specific metadata, schemas, examples, and supporting files. Before reusing a completed form, verify the resource identifier, V1.0, chapter alignment, evidence cut-off, local modification date, and current institutional requirements.

- Begin with a defined institutional decision, population, setting, accountable decision-maker, and realistic comparator rather than with the form.
- Select only the records proportionate to consequence, uncertainty, scale, reversibility, and institutional dependence.
- Create a governed local copy and retain the resource ID, V1.0, evidence cut-off, owner, review date, and a record of local changes.
- Replace illustrative or synthetic material with authorized, versioned local evidence. Preserve unknowns, disagreements, and limitations explicitly.
- Do not enter identifiable patient information, credentials, private keys, confidential contracts, or other restricted information into uncontrolled copies.

- Conclude with a current decision state, conditions, mandatory safeguards, monitoring thresholds, transition triggers, accountable authority, next review date, and credible exit route.

The resources support education, structured analysis, documentation, and institutional deliberation. They do not constitute clinical, legal, regulatory, privacy, cybersecurity, procurement, accreditation, financial, or health technology assessment advice, and a completed form does not establish that an intervention is safe, effective, equitable, affordable, sustainable, or appropriate.

Resource Index

ID	Resource	Chapter	Chapter title	Version
AIHE-A01	Decision and Use-Case Specification	1	AI as a Health-System Intervention	V1.0
AIHE-A02	Stakeholders, Decision Rights, and Participation	1	AI as a Health-System Intervention	V1.0
AIHE-A03	Institutional Readiness Assessment	2	Institutional Readiness and Digital Foundations	V1.0
AIHE-A04	Data Source, Provenance, and Fitness Record	2	Institutional Readiness and Digital Foundations	V1.0
AIHE-C04	Human Oversight and Accountability Matrix	3	Human–AI Decision Systems and Managerial Action	V1.0
AIHE-B03	Benefit Realization and Capacity Conversion	4	Productivity, Work Redesign, and Implementation	V1.0
AIHE-C01	AI Quality-Control and Accreditation Evidence Plan	5	Quality Management, Accreditation, and Organizational Learning	V1.0
AIHE-C02	Corrective and Preventive Action Record	5	Quality Management, Accreditation, and Organizational Learning	V1.0
AIHE-B01	Economic Evaluation Specification	6	Lifecycle Cost, Pricing, and Benefit Realization	V1.0
AIHE-B02	Lifecycle Cost and Pricing Record	6	Lifecycle Cost, Pricing, and Benefit Realization	V1.0
AIHE-B04	Cost-Effectiveness, Budget	7	Economic Evaluation,	V1.0

	Impact, and HTA Record		Affordability, and Health Technology Assessment	
AIHE-B05	Model Selection, Uncertainty, and Reproducibility	8	Decision Modelling, Simulation, and the Value of Information	V1.0
AIHE-D01	Vendor Evidence and Contract Requirements	9	Problem-First Procurement and Vendor Governance	V1.0
AIHE-C03	Integrated Institutional-Risk Review	10	Governance, Accountability, and Institutional Risk	V1.0
AIHE-C05	Public Transparency and Communication Record	10	Governance, Accountability, and Institutional Risk	V1.0
AIHE-D02	Lifecycle Decision State, Staged Evidence, and AI-HED Status	12	Decision Architecture and Lifecycle Governance	V1.0
AIHE-D03	Post-Deployment Monitoring and Algorithmovigilance Cadence	12	Decision Architecture and Lifecycle Governance	V1.0
AIHE-D04	Incident Classification and Reconstruction	12	Decision Architecture and Lifecycle Governance	V1.0
AIHE-D05	Material Change, Reauthorization, Renewal, Replacement, and Retirement Record	12	Decision Architecture and Lifecycle Governance	V1.0
AIHE-E01	Circular-Economy and Sustainable-AI Assessment	13	Circular Health Systems and Resource Stewardship	V1.0
AIHE-E02	Circular Procurement and Supplier Scorecard	14	Circular Procurement and Asset Stewardship	V1.0
AIHE-E03	Supported Asset-Life Decision Record	14	Circular Procurement and Asset Stewardship	V1.0
AIHE-E04	Circularity-Adjusted	15	Circularity-Adjusted	V1.0

	Evaluation Record		Economic Evaluation and Sustainable Value	
AIHE-E05	Environmental, Circularity, and Disposition Dashboard	15	Circularity-Adjusted Economic Evaluation and Sustainable Value	V1.0

Part I — Managerial and Economic Foundations

AIHE-A01 — Decision and Use-Case Specification

Primary chapter	1 — AI as a Health-System Intervention	Resource version	V1.0
Aligned chapters	1, 2, 3	Canonical folder	chapters/01/core/AIHE-A01
Purpose	Define the service problem, full intervention, realistic comparators, outcomes, value mechanism, decision rule, and review cycle.	Legacy aliases	AIHE-W; AIHE-X
Status	public	Repository release	V1.0

Completion guidance

Complete the form with the people who own the evidence, workflow, budget, safeguards, and follow-up action. Distinguish documented evidence from assumptions and planned evidence collection. Record the exact system and version, accountable owner, decision conditions, review date, and trigger events.

Field	Guidance	Institutional response
Service problem and baseline burden	Describe the unmet clinical, operational, workforce, quality, accreditation, or public-health need using measurable baseline evidence.	
Population and setting	Define included and excluded populations, services, locations, and time periods.	
AI-enabled intervention	Describe the complete intervention bundle: data, model, interfaces, thresholds, users, review, workflow, downstream action, monitoring, support, and exit.	
Realistic comparators	Record current practice, process redesign, staffing, equipment, conventional digital tools, alternative AI, shared service, and no-change options where relevant.	
Decision-maker and perspective	Identify the authority making the decision and the hospital, health-system, payer, patient, societal, or combined perspective.	
Primary and balancing outcomes	Define clinical, operational, quality, accreditation, workforce, economic, equity, trust, environmental, and safety outcomes.	
Time horizon and decision window	State the analytic horizon and the time within which an output must lead to action.	
Value mechanism	Explain how the intervention is expected to change a decision, action, outcome, resource consequence, and public value.	

Decision rule	Define proceed, redesign, silent validation, pilot, conditional adoption, scale, restrict, pause, replace, or retire criteria.	
Evidence cut-off and next review	Record the last evidence date, responsible reviewer, planned review date, and trigger events.	

AIHE-A02 — Stakeholders, Decision Rights, and Participation

Primary chapter	1 — AI as a Health-System Intervention	Resource version	V1.0
Aligned chapters	1, 3, 10, 12	Canonical folder	chapters/01/core/AIHE-A02
Purpose	Identify affected parties, decision rights, participation duties, evidence contributions, and escalation authority.	Legacy aliases	AIHE-EX01
Status	public	Repository release	V1.0

Completion guidance

Complete the form with the people who own the evidence, workflow, budget, safeguards, and follow-up action. Distinguish documented evidence from assumptions and planned evidence collection. Record the exact system and version, accountable owner, decision conditions, review date, and trigger events.

Role or group	Interest or potential effect	Decision duty	Participation, evidence, or action required
Board or executive sponsor	Strategy, public accountability, resources, and risk appetite	Approve material commitment and named accountability	
Clinical and operational leads	Safety, workflow, professional practice, and service capacity	Specify intended use, action, fallback, and clinical acceptance	
Quality and accreditation leads	Standards, controls, evidence, incidents, and improvement	Integrate the intervention into quality-management and accreditation processes	
Health economics, finance, payer, or HTA	Cost, outcomes, affordability, opportunity cost, reimbursement, and value	Approve economic methods, assumptions, and budget consequences	
Data, informatics, IT, and cybersecurity	Data fitness, interoperability, architecture, security, resilience, and monitoring	Verify technical readiness and continuing operability	
Ethics, privacy, legal, and compliance	Rights, lawful use, fairness, contestability, and obligations	Define mandatory safeguards and unresolved legal or ethical conditions	
Procurement and contract management	Evidence, price, service levels, updates, remedies, portability, and exit	Translate requirements into enforceable terms	
Patients, public, and workforce representatives	Access, experience, acceptability, trust, burden, and group effects	Contribute priorities, communication requirements, and challenge	

AIHE-A03 — Institutional Readiness Assessment

Primary chapter	2 — Institutional Readiness and Digital Foundations	Resource version	V1.0
Aligned chapters	2, 4, 5, 9, 10, 12	Canonical folder	chapters/02/core/AIHE-A03
Purpose	Assess strategic, data, infrastructure, workflow, workforce, quality, economic, governance, procurement, and sustainability	Legacy aliases	AIHE-A; AIHE-L

	readiness.		
Status	public	Repository release	V1.0

Completion guidance

Complete the form with the people who own the evidence, workflow, budget, safeguards, and follow-up action. Distinguish documented evidence from assumptions and planned evidence collection. Record the exact system and version, accountable owner, decision conditions, review date, and trigger events.

Domain	Assessment question	0–4	Evidence, gap, prerequisite, and owner
Strategic alignment	Is the problem linked to documented health-system priorities and realistic alternatives?		
Data fitness	Are required data lawful, available, timely, representative, traceable, and sustainable?		
Interoperability	Can inputs and outputs be exchanged and interpreted consistently within the decision window?		
Infrastructure and resilience	Are identity, access, compute, storage, interfaces, logging, fallback, and recovery adequate?		
Workflow and downstream capacity	Can users interpret the output and take the intended action without shifting unsafe burden?		
Workforce capability	Are roles, training, competency, supervision, and professional responsibilities defined?		
Quality and accreditation	Are controls, indicators, evidence, incident processes, and improvement responsibilities integrated?		
Economics and affordability	Are lifecycle costs, resource constraints, benefits, uncertainty, and budget exposure understood?		
Governance and assurance	Are decision rights, safeguards, independent review, monitoring, and authority to stop defined?		
Procurement and vendor readiness	Can evidence, audit, updates, data rights, support, pricing, portability, and exit be contracted?		
Circularity and sustainability	Are resource demand, asset life, maintenance, take-back, residual value, and disposition considered where material?		

AIHE-A04 — Data Source, Provenance, and Fitness Record

Primary chapter	2 — Institutional Readiness and Digital Foundations	Resource version	V1.0
Aligned chapters	2, 8, 11, 12	Canonical folder	chapters/02/core/AIHE-A04
Purpose	Document source and derived data assets, authority, definitions, transformations, quality, lineage, monitoring, and remediation.	Legacy aliases	AIHE-EX03; AIHE-Y; AIHE-U
Status	public	Repository release	V1.0

Completion guidance

Complete the form with the people who own the evidence, workflow, budget, safeguards, and follow-up action. Distinguish documented evidence from assumptions and planned evidence collection. Record the exact system and version, accountable owner, decision conditions, review date, and trigger events.

Source or derived asset	Purpose and required timing	Authority and steward	Definition, units, and transformations	Completeness, plausibility, and representativeness	Lineage, version, and monitoring	Risk, remediation, and decision

AIHE-C04 — Human Oversight and Accountability Matrix

Primary chapter	3 — Human–AI Decision Systems and Managerial Action	Resource version	V1.0
Aligned chapters	3, 10, 12	Canonical folder	chapters/03/core/AIHE-C04
Purpose	Assign accountability, responsibility, consultation, information, escalation, pause, update, restart, and retirement authority.	Legacy aliases	AIHE-O
Status	public	Repository release	V1.0

Completion guidance

Complete the form with the people who own the evidence, workflow, budget, safeguards, and follow-up action. Distinguish documented evidence from assumptions and planned evidence collection. Record the exact system and version, accountable owner, decision conditions, review date, and trigger events.

Activity	Executive	Clinical	Quality	Data/IT	Economics	Ethics/risk	Procurement vendor
Define problem, comparator, and intended use							
Assess evidence, data, and local validity							
Conduct economic and affordability analysis							
Approve procurement, contract, and pilot							
Operate, review, override, and escalate							
Investigate incidents and corrective action							
Approve material change or expansion							
Renew, restrict, replace, pause, restart, or retire							

Part II — Organizational Performance, Workforce, and Quality

AIHE-B03 — Benefit Realization and Capacity Conversion

Primary chapter	4 — Productivity, Work Redesign, and Implementation	Resource version	V1.0
Aligned chapters	4, 6, 7, 12	Canonical folder	chapters/04/core/AIHE-B03
Purpose	Translate claimed benefits into measurable mechanisms, owners, baselines, conversion conditions, and realized results.	Legacy aliases	AIHE-Z; AIHE-EX07
Status	public	Repository release	V1.0

Completion guidance

Complete the form with the people who own the evidence, workflow, budget, safeguards, and follow-up action. Distinguish documented evidence from assumptions and planned evidence collection. Record the exact system and version, accountable owner, decision conditions, review date, and trigger events.

Claimed benefit and comparator	Causal mechanism, affected workflow, and distribution	Measure, baseline, evidence, and attribution	Owner, timing, and capacity-allocation decision	Review burden, conversion condition, realized result, and financial treatment

AIHE-C01 — AI Quality-Control and Accreditation Evidence Plan

Primary chapter	5 — Quality Management, Accreditation, and Organizational Learning	Resource version	V1.0
Aligned chapters	5, 10, 11, 12	Canonical folder	chapters/05/core/AIHE-C01
Purpose	Integrate AI-enabled services into quality control, accreditation evidence, monitoring, thresholds, action, and closure.	Legacy aliases	AIHE-I; AIHE-QC01
Status	public	Repository release	V1.0

Completion guidance

Complete the form with the people who own the evidence, workflow, budget, safeguards, and follow-up action. Distinguish documented evidence from assumptions and planned evidence collection. Record the exact system and version, accountable owner, decision conditions, review date, and trigger events.

Quality domain or requirement	Signal, measure, definition, and source	System, data, and workflow version	Review frequency, reviewer, and triage rule	Control, clinical, or institutional threshold	Escalation, investigation, and corrective action	Effectiveness verification, closure authority, and learning
Technical reliability						
Model and human–AI performance						
Clinical safety and outcome						
Workflow and professional practice						
Patient experience and communication						
Equity and access						
Economic and resource value						
Governance and documentation						

AIHE-C02 — Corrective and Preventive Action Record

Primary chapter	5 — Quality Management, Accreditation, and Organizational Learning	Resource version	V1.0
Aligned chapters	5, 10, 12	Canonical folder	chapters/05/core/AIHE-C02
Purpose	Document nonconformity, containment, causal analysis, corrective and preventive action, effectiveness, residual risk, and closure.	Legacy aliases	AIHE-QC02
Status	public	Repository release	V1.0

Completion guidance

Complete the form with the people who own the evidence, workflow, budget, safeguards, and follow-up action. Distinguish documented evidence from assumptions and planned evidence collection. Record the exact system and version, accountable owner, decision conditions, review date, and trigger events.

Field	Guidance	Institutional response
Signal, triage, and scope	Describe the indicator, incident, complaint,	

	audit finding, accreditation gap, threshold breach, affected system or version, and triage decision.	
Immediate containment	Record protections for patients, staff, data, service continuity, and evidence, including restriction, rollback, or pause.	
Reconstruction and evidence preservation	Preserve the data state, model, software and configuration version, output, human action, timing, workload, communication, and context.	
Causal analysis	Identify confirmed and competing technical, clinical, workflow, organizational, supplier, contractual, and governance causes.	
Corrective action	Define the action, accountable owner, due date, revalidation, communication, supplier response, and implication for the current decision state.	
Preventive and recurrence-control action	Identify surveillance, training, documentation, contract, design, and portfolio controls intended to prevent recurrence.	
Effectiveness verification	Define the evidence, observation period, threshold, reviewer, residual uncertainty, and basis for deciding whether the action worked.	
Closure and institutional learning	Record closure authority, decision, dissent, residual risk, next review, lessons, and changes to related systems or policies.	

Part III — Economic Evaluation, Decision Modelling, and Procurement

AIHE-B01 — Economic Evaluation Specification

Primary chapter	6 — Lifecycle Cost, Pricing, and Benefit	Resource version	V1.0
-----------------	--	------------------	------

	Realization		
Aligned chapters	6, 7, 8	Canonical folder	chapters/06/core/AIHE-B01
Purpose	Define the economic decision, perspective, comparator, horizon, outcomes, costs, methods, uncertainty, safeguards, and validation.	Legacy aliases	AIHE-B
Status	public	Repository release	V1.0

Completion guidance

Complete the form with the people who own the evidence, workflow, budget, safeguards, and follow-up action. Distinguish documented evidence from assumptions and planned evidence collection. Record the exact system and version, accountable owner, decision conditions, review date, and trigger events.

Field	Guidance	Institutional response
Decision and comparator	State the incremental decision and all realistic alternatives.	
Population, setting, and subgroups	Define eligible volume, uptake, important heterogeneity, and access constraints.	
Perspective and budget holder	Distinguish hospital, payer, patient, societal, and environmental perspectives and identify who pays and benefits.	
Time horizon, cycle, and discounting	Justify duration, timing of implementation, useful life, updating, residual value, and discount rates.	
Outcome hierarchy	Separate final health outcomes, intermediate outcomes, process measures, workforce effects, quality, equity, trust, and environmental effects.	
Cost boundary	Include acquisition, data, integration, infrastructure, training, review, governance, monitoring, incidents, updates, support, opportunity cost, and exit where incremental.	
Analytic approach	Specify cost-consequence, cost-effectiveness, cost-utility, cost-benefit, budget impact, ROI, multi-criteria, or combined analysis.	
Uncertainty and heterogeneity	Define deterministic, probabilistic, scenario, threshold, structural, subgroup, and value-of-information analyses.	
Decision rule and safeguards	State willingness-to-pay or net-benefit rule, affordability threshold, mandatory safeguards, and conditions.	
Reporting and validation	Record model version, evidence date, technical verification, face validity, external review, reproducibility, and archive location.	

AIHE-B02 — Lifecycle Cost and Pricing Record

Primary chapter	6 — Lifecycle Cost, Pricing, and Benefit Realization	Resource version	V1.0
Aligned chapters	6, 9, 12, 14, 15	Canonical folder	chapters/06/core/AIHE-B02
Purpose	Record acquisition through exit costs, resource use, pricing exposure, opportunity cost, residual value, and evidence.	Legacy aliases	AIHE-M; AIHE-EX17
Status	public	Repository release	V1.0

Completion guidance

Complete the form with the people who own the evidence, workflow, budget, safeguards, and follow-up action. Distinguish documented evidence from assumptions and planned evidence collection. Record the exact system and version, accountable owner, decision conditions, review date, and trigger events.

Lifecycle layer	Resource or pricing unit	Quantity	Economic cost	Cash expenditure	Accounting expense	Budget owner or incidence	Timing or scenario	Evidence, assumptions, and notes
Acquisition, licence, and initial commitment								
Data preparation, governance, and access								
Integration, infrastructure, and interoperability								
Validation, assurance, and implementation								
Training, workflow redesign, and human review								
Quality, ethics, legal, privacy, and audit								

Cybersecurity, resilience, downtime, and incidents								
Monitoring, updates, support, and renewal								
Opportunity cost and displaced or released capacity								
Transition, replacement, retirement, and exit								
Realizable residual value or recovery credit								

AIHE-B04 — Cost-Effectiveness, Budget Impact, and HTA Record

Primary chapter	7 — Economic Evaluation, Affordability, and Health Technology Assessment	Resource version	V1.0
Aligned chapters	7, 8, 9, 11	Canonical folder	chapters/07/core/AIHE-B04
Purpose	Summarize cost-effectiveness, affordability, distribution, HTA, reimbursement, adoption conditions, uncertainty, and recommendation.	Legacy aliases	AIHE-AA; AIHE-EX18
Status	public	Repository release	V1.0

Completion guidance

Complete the form with the people who own the evidence, workflow, budget, safeguards, and follow-up action. Distinguish documented evidence from assumptions and planned evidence collection. Record the exact system and version, accountable owner, decision conditions, review date, and trigger events.

Field	Guidance	Institutional response
Incremental cost and outcome	Report disaggregated and summary results relative to the comparator.	
ICER or net benefit	State the threshold, currency and price year, and probability that the preferred option is cost-effective.	
Budget impact	Report eligible volume, uptake, implementation timing, annual cash flow, funding source, and cashable versus non-cashable savings.	
Distribution and equity	Report subgroup outcomes, access, burdens, opportunity costs, mitigation, and residual concern.	
Regulatory and clinical evidence status	Distinguish authorization, external clinical evidence, joint or national assessment, and local evidence.	
Reimbursement and payment	Identify coverage, coding, tariff, payer, claim, denial, and incentive implications.	
Local adoption conditions	Record readiness, procurement, workforce, quality, accreditation, governance, and monitoring prerequisites.	
Uncertainty and additional evidence	Identify parameters that may change the decision and the value, cost, and timing of further research.	
Recommendation	Record adopt, pilot, conditional use, restrict, defer, redesign, reject, or retire, together with conditions and review date.	

AIHE-B05 — Model Selection, Uncertainty, and Reproducibility

Primary chapter	8 — Decision Modelling, Simulation, and the Value of Information	Resource version	V1.0
Aligned chapters	8, 11, 15	Canonical folder	chapters/08/core/AIHE-B05
Purpose	Select a decision model from the problem structure and document evidence, verification, uncertainty, and reproducibility.	Legacy aliases	AIHE-EX15; AIHE-EX16; AIHE-AF; AIHE-EX04; AIHE-EX06
Status	public	Repository release	V1.0

Completion guidance

Complete the form with the people who own the evidence, workflow, budget, safeguards, and follow-up action. Distinguish documented evidence from assumptions and planned evidence collection. Record the exact system and version, accountable owner, decision conditions, review date, and trigger events.

Decision or uncertainty feature	Appropriate analytical response	Critical evidence and assumptions	Verification, validation, research-value, and reproducibility record
Short, non-recurring pathway	Decision tree	Branches, probabilities, costs, outcomes, thresholds, and downstream action	Logic review, extreme-value tests, deterministic and probabilistic analysis
Recurring health states	Cohort state-transition model	Transitions, time dependence, utilities, costs, competing events,	Trace validation, cycle and horizon tests, calibration, and

		and intervention effects	structural alternatives
Individual heterogeneity and history	Microsimulation	Patient-level distributions, correlations, histories, subgroup effects, and treatment rules	Seeds, replications, convergence, internal and external validation, and subgroup checks
Queues, capacity, and event timing	Discrete-event simulation	Arrivals, service times, routing, capacity, prioritization, downtime, and response constraints	Event-trace review, warm-up, run length, replications, and stress tests
Interacting actors, behaviours, or feedback	Agent-based, system-dynamics, or hybrid model	Behaviour rules, networks, stocks, flows, delays, adaptation, and policy feedback	Pattern validation, rule sensitivity, alternative structures, and face validity
AI-specific characteristics and uncertainty	Explicit model features, scenarios, and value-of-information analysis	Thresholds, calibration, drift, abstention, review burden, updating, version change, implementation, and evidence cost	EVPI, EVPPI, EVSI or ENBS where justified; version-matched evidence; test suite; provenance; decision traceability

AIHE-D01 — Vendor Evidence and Contract Requirements

Primary chapter	9 — Problem-First Procurement and Vendor Governance	Resource version	V1.0
Aligned chapters	6, 9, 10, 12, 14	Canonical folder	chapters/09/core/AIHE-D01
Purpose	Translate evidence, interoperability, data, security, monitoring, update, service, remedy, portability, and exit requirements into contract terms.	Legacy aliases	AIHE-D; AIHE-EX08; AIHE-EX09
Status	public	Repository release	V1.0

Completion guidance

Complete the form with the people who own the evidence, workflow, budget, safeguards, and follow-up action. Distinguish documented evidence from assumptions and planned evidence collection. Record the exact system and version, accountable owner, decision conditions, review date, and trigger events.

Requirement	Evidence or clause requested	Independent and local verification	Risk if absent or incorrect	Remedy and exit position	Owner and status
Exact supplier, product, model, configuration,					

intended and excluded use, population, and version					
Clinical, technical, human-factors, implementation, and economic evidence					
Upstream model, cloud, data, component, subprocessor, and infrastructure dependencies					
Interoperability, data quality, provenance, access, export, and portability					
Privacy, cybersecurity, resilience, continuity, incidents, and recovery					
Pricing units, volume exposure, integration, support, escalation, and auditability					
Continuing disclosure, change notification, validation, approval, rollback, and release control					
Monitoring data,					

logs, evidence access, audit rights, and assurance cooperation					
Service levels, downtime, fallback, support, remedies, liability, renewal, termination, and exit					

Part IV — Governance, Evidence, and Lifecycle Decision-Making

AIHE-C03 — Integrated Institutional-Risk Review

Primary chapter	10 — Governance, Accountability, and Institutional Risk	Resource version	V1.0
Aligned chapters	10, 12	Canonical folder	chapters/10/core/AIHE-C03
Purpose	Review ethics, equity, privacy, cybersecurity, safety, continuity, trust, legal, and economic risks as one institutional system.	Legacy aliases	AIHE-C; AIHE-AB; AIHE-AC; AIHE-N; AIHE-G
Status	public	Repository release	V1.0

Completion guidance

Complete the form with the people who own the evidence, workflow, budget, safeguards, and follow-up action. Distinguish documented evidence from assumptions and planned evidence collection. Record the exact system and version, accountable owner, decision conditions, review date, and trigger events.

Domain	Question and evidence	Status and residual risk	Safeguard, owner, action, and review
Autonomy and contestability	Are people informed appropriately, able to question consequential use, and offered a human route where required?		
Safety and effectiveness	Are intended use, limitations, local performance, workflow controls, and fallback acceptable?		
Equity and inclusion	Are data, performance, access, outcomes, and burdens assessed across relevant groups?		
Privacy and lawful data use	Are purpose, necessity, minimization, authority, retention, access, and secondary use governed?		
Cybersecurity and resilience	Are threat, supplier, integration, logging, incident, downtime, recovery, and continuity controls adequate?		

Transparency and trust	Are evidence, uncertainty, limitations, responsibilities, incidents, and communication credible and accessible?		
Accountability and oversight	Are decision rights, review workload, escalation, pause, update, restart, renewal, and retirement authority explicit?		

AIHE-C05 — Public Transparency and Communication Record

Primary chapter	10 — Governance, Accountability, and Institutional Risk	Resource version	V1.0
Aligned chapters	3, 10, 12	Canonical folder	chapters/10/core/AIHE-C05
Purpose	Define accurate, accessible communication about intended use, limitations, oversight, data, complaints, incidents, and alternatives.	Legacy aliases	AIHE-EX13
Status	public	Repository release	V1.0

Completion guidance

Complete the form with the people who own the evidence, workflow, budget, safeguards, and follow-up action. Distinguish documented evidence from assumptions and planned evidence collection. Record the exact system and version, accountable owner, decision conditions, review date, and trigger events.

Communication element	Approved content, channel, owner, and review
Purpose and intended use	
What the system does and does not do	
Role of human review and accountability	
Data use, privacy, retention, and external providers	
Known limitations, uncertainty, and subgroup concerns	
Accessibility, language, disability, and non-digital alternatives	
Questions, complaints, contestability, and incident communication	
Material changes, suspension, and retirement	

AIHE-D02 — Lifecycle Decision State, Staged Evidence, and AI-HED Status

Primary chapter	12 — Decision Architecture and Lifecycle Governance	Resource version	V1.0
Aligned chapters	4, 9, 11, 12	Canonical folder	chapters/12/core/AIHE-D02
Purpose	Record the intervention’s current institutional decision state, scope, evidence, conditions,	Legacy aliases	AIHE-Q; AIHE-R; AIHE-EX14; AIHE-EX10; AIHE-AE; AIHE-E; AIHE-EX02; AIHE-H; AIHE-K; AIHE-P; AIHE-V

	safeguards, unresolved uncertainty, transition triggers, accountable authority, and decision history.		
Status	public	Repository release	V1.0

Completion guidance

Complete the form with the people who own the evidence, workflow, budget, safeguards, and follow-up action. Distinguish documented evidence from assumptions and planned evidence collection. Record the exact system and version, accountable owner, decision conditions, review date, and trigger events.

Decision-provenance element	Required evidence or record	Current status or state	Condition, safeguard, trigger, or unresolved matter	Accountable authority, date, and next review
Decision identity	Intervention, supplier, model, configuration, data, workflow, intended use, population, setting, comparator, and version			
Current institutional decision state	Not authorized; evidence development; silent evaluation; restricted pilot; conditional use; routine authorized use; suspended; replacement; retired			
Scope and effective date	Authorized population, setting, users, functions, exclusions, start date, and expiry or review point			
Evidence basis and cut-off	Version-matched technical, clinical, causal, economic, implementation, governance, quality, and contractual evidence			

Mandatory safeguards and conditions	Non-compensatory safety, equity, privacy, cybersecurity, human-oversight, continuity, and legal conditions			
Unresolved uncertainty and monitoring	Decision-critical uncertainty, signals, thresholds, owners, review cadence, and evidence-development commitments			
Transition and material-change triggers	Incidents, drift, changed data, model, workflow or intended use; supplier notice; price; support; law; capacity; evidence; or comparator			
Decision history and next review	Previous states, reasons for transitions, dissent, conditions, accountable authority, effective date, and next review			

AIHE-D03 — Post-Deployment Monitoring and Algorithmovigilance Cadence

Primary chapter	12 — Decision Architecture and Lifecycle Governance	Resource version	V1.0
Aligned chapters	5, 11, 12	Canonical folder	chapters/12/core/AIHE-D03
Purpose	Define recurring and event-triggered surveillance across technical, workflow, safety, equity, economic, and contractual domains.	Legacy aliases	AIHE-S
Status	public	Repository release	V1.0

Completion guidance

Complete the form with the people who own the evidence, workflow, budget, safeguards, and follow-up action. Distinguish documented evidence from assumptions and planned evidence collection. Record the exact system and version, accountable owner, decision conditions, review date, and trigger events.

Frequency	Purpose	Minimum review content	Owner or forum
Continuous or daily	Technical integrity and immediate service protection	Availability, latency, interfaces, input completeness, deployed version, logging, cybersecurity alerts, and fallback	Technical operations and service owner
Weekly during pilots or high-consequence use	Workflow and operational review	Output volume, action, overrides, delays, workarounds, review burden, near misses, and downstream capacity	Clinical and operational leads
Monthly	Multidisciplinary safety and performance review	Technical and human–AI performance, outcomes, complaints, incidents, vendor notices, training, and corrective actions	Quality and AI-governance forum
Quarterly or semi-annually	Distributional, workforce, and economic review	Subgroups, access, workload, adoption, lifecycle cost, benefit realization, budget impact, equity, and trust	Economics, quality, equity, workforce, and governance leads
Annually	Formal renewal, restriction, replacement, or retirement	Current intended use, evidence, value, residual risk, contract, updates, alternatives, monitoring capacity, and exit readiness	Executive decision authority
Event triggered	Material change or serious incident review	Model, data, threshold, interface, workflow, vendor, security, policy, population, price, or serious performance change	Named incident or change authority

AIHE-D04 — Incident Classification and Reconstruction

Primary chapter	12 — Decision Architecture and Lifecycle Governance	Resource version	V1.0
Aligned chapters	5, 10, 11, 12	Canonical folder	chapters/12/core/AIHE-D04
Purpose	Reconstruct technical, clinical, workflow, privacy, cybersecurity, equity, communication, and economic incidents consistently.	Legacy aliases	AIHE-EX12
Status	public	Repository release	V1.0

Completion guidance

Complete the form with the people who own the evidence, workflow, budget, safeguards, and follow-up action. Distinguish documented evidence from assumptions and planned evidence collection. Record the exact system and version, accountable owner, decision conditions, review date, and trigger events.

Field	Guidance	Institutional response
Event, detection, and category	Describe the event or pattern, who detected it, and how it was classified.	

Data and provenance	Preserve available data, source, timestamp, transformation, missingness, quality state, and recent source changes.	
System and configuration	Record model, software, threshold, interface, prompt, template, retrieval, knowledge source, and hosting versions.	
AI output and uncertainty	Preserve score, classification, recommendation, generated content, alert, action, explanation, and uncertainty.	
Human action and decision context	Record recipient, information available, accept, reject, modify, ignore, escalation, rationale, workload, staffing, patient condition, and capacity.	
Immediate response	Record patient and service protection, containment, notification, restriction, pause, rollback, and fallback.	
Causal analysis and residual uncertainty	Distinguish confirmed, contributing, and unresolved technical, clinical, workflow, organizational, and governance causes.	
Corrective and preventive action	Record action, owner, deadline, revalidation, communication, vendor or contract response, monitoring change, and effectiveness check.	
Closure and learning	Record closure authority, evidence, affected records and people, residual risk, recurrence prevention, and portfolio implications.	

AIHE-D05 — Material Change, Reauthorization, Renewal, Replacement, and Retirement Record

Primary chapter	12 — Decision Architecture and Lifecycle Governance	Resource version	V1.0
Aligned chapters	9, 11, 12, 14	Canonical folder	chapters/12/core/AIHE-D05
Purpose	Assess material changes and periodic renewal across system, data, workflow, vendor, price, law, evidence, alternatives, and exit.	Legacy aliases	AIHE-EX11; AIHE-T; AIHE-J
Status	public	Repository release	V1.0

Completion guidance

Complete the form with the people who own the evidence, workflow, budget, safeguards, and follow-up action. Distinguish documented evidence from assumptions and planned evidence collection. Record the exact system and version, accountable owner, decision conditions, review date, and trigger events.

Field	Guidance	Institutional response
Change or review trigger	Model, data source, threshold, interface, workflow, intended use, population, hosting, infrastructure, supplier, upstream dependency, pricing, support, law, evidence, or comparator.	
Previous and proposed identity	Record the system, model, configuration, data, workflow, supplier, intended use, and versions before and after the change.	

Materiality and immediate control	Assess effects on behaviour, performance, risk, user interaction, resource use, evidence, and obligations; record restriction, rollback, silent mode, pause, or continuity control.	
Evidence and dossier elements affected	Identify validation, causal, economic, implementation, quality, equity, governance, contract, training, communication, monitoring, and AI-HED records requiring revision.	
Revalidation and reauthorization plan	Define tests, subgroups, human factors, acceptance thresholds, pilot or silent evaluation, accountable reviewers, approval route, and release plan.	
Current value, affordability, and alternatives	Reassess lifecycle cost, benefit realization, budget incidence, price, supported life, risk, opportunity cost, replacement, and credible alternatives.	
Lifecycle decision	Continue unchanged; continue with conditions; modify; restrict; suspend; reauthorize; renew; renegotiate; replace; or retire.	
Continuity, closure, and next review	Record fallback, data export, retention or deletion, workflow transition, communication, contract closure, asset disposition, end of authorization, authority, date, and next trigger.	

Part V — Circular Economy and Sustainable Value

AIHE-E01 — Circular-Economy and Sustainable-AI Assessment

Primary chapter	13 — Circular Health Systems and Resource Stewardship	Resource version	V1.0
Aligned chapters	13, 14, 15	Canonical folder	chapters/13/core/AIHE-E01
Purpose	Apply the circularity hierarchy from	Legacy aliases	AIHE-CE1

	prevention and reduction through sharing, maintenance, reuse, refurbishment, recovery, and disposal.		
Status	public	Repository release	V1.0

Completion guidance

Complete the form with the people who own the evidence, workflow, budget, safeguards, and follow-up action. Distinguish documented evidence from assumptions and planned evidence collection. Record the exact system and version, accountable owner, decision conditions, review date, and trigger events.

Strategy or domain	Decision question and evidence	Expected value and burden	Constraint, action, owner, and measure
Prevent or avoid	Can the service need be met without new acquisition, unnecessary computation, duplicate data, or low-value activity?		
Reduce and optimize	Can model, storage, data, hardware, energy, water, and material intensity be reduced per useful output?		
Share and intensify safe use	Can infrastructure, services, capacity, or assets be shared without unacceptable dependency or access effects?		
Maintain and repair	Can preventive maintenance, software support, components, and repair preserve safe useful life?		
Reuse or repurpose	Can the asset or component serve a verified use after data erasure, validation, and recipient due diligence?		
Refurbish or remanufacture	Can selected components and controls restore performance and evidence at lower lifecycle burden?		
Recover materials	Are take-back, traceability, verified recovery, and critical-material outcomes documented?		
Dispose	Is final disposal necessary, lawful, secure, and supported by chain of custody?		
Rebound and burden shifting	Could lower unit cost or greater capacity increase total use or shift burden across places, groups, or lifecycle stages?		

AIHE-E02 — Circular Procurement and Supplier Scorecard

Primary chapter	14 — Circular Procurement and Asset Stewardship	Resource version	V1.0
Aligned chapters	9, 13, 14	Canonical folder	chapters/14/core/AIHE-E02
Purpose	Evaluate durability, modularity, repairability, interoperability, resource information, take-back, pricing, residual value, and exit.	Legacy aliases	AIHE-CE2
Status	public	Repository release	V1.0

Completion guidance

Complete the form with the people who own the evidence, workflow, budget, safeguards, and follow-up action. Distinguish documented evidence from assumptions and planned evidence collection. Record the exact system and version, accountable owner, decision conditions, review date, and trigger events.

Criterion	Requirement and evidence	Score	Lifecycle and economic implication	Risk, safeguard, and contract term	Owner and decision
Durability and supported life					
Modularity, upgradeability, and component availability					
Repairability and maintenance information					
Interoperability, portability, and avoidance of lock-in					
Energy, water, carbon, material, and utilization information					
Product circularity, provenance, and recovery information					
Take-back, refurbishment, remanufacture, and recovery					
Secure erasure, chain of custody, and disposition evidence					
Pricing, residual value, risk sharing, and exit					

AIHE-E03 — Supported Asset-Life Decision Record

Primary chapter	14 — Circular Procurement and Asset Stewardship	Resource version	V1.0
Aligned chapters	6, 14, 15	Canonical folder	chapters/14/core/AIHE-E03
Purpose	Compare maintain, refurbish, replace, and shared-service options across suitability, life, cost, resources, resilience, and disposition.	Legacy aliases	AIHE-CE3
Status	public	Repository release	V1.0

Completion guidance

Complete the form with the people who own the evidence, workflow, budget, safeguards, and follow-up action. Distinguish documented evidence from assumptions and planned evidence collection. Record the exact system and version, accountable owner, decision conditions, review date, and trigger events.

Eligibility and decision factor	Maintain, repair, or upgrade	Refurbish or remanufacture	Replace	Shared service or other option	Evidence, uncertainty, threshold, and
---------------------------------	------------------------------	----------------------------	---------	--------------------------------	---------------------------------------

					decision
Mandatory eligibility: safety, clinical suitability, regulation, cybersecurity, support, interoperability, and continuity					
Physical condition, performance, reliability, utilization, and downtime					
Supported service life: hardware, software, firmware, model, interface, maintenance, parts, and supplier support					
Functional, technical, economic, cybersecurity, and regulatory obsolescence					
Lifecycle cash flow, equivalent annual cost, budget incidence, and downside exposure					
Workforce, workflow, transition, validation, and implementation burden					

Energy, water, material, waste, resilience, and critical dependency effects					
Realizable residual value, recovery cost, closure, and final destination					
Minimum life-extension or maximum-failure threshold and final recommendation					

AIHE-E04 — Circularity-Adjusted Evaluation Record

Primary chapter	15 — Circularity-Adjusted Economic Evaluation and Sustainable Value	Resource version	V1.0
Aligned chapters	15	Canonical folder	chapters/15/core/AIHE-E04
Purpose	Extend conventional economic evaluation with environmental, material, residual-value, resilience, equity, rebound, and burden evidence.	Legacy aliases	AIHE-CE6
Status	public	Repository release	V1.0

Completion guidance

Complete the form with the people who own the evidence, workflow, budget, safeguards, and follow-up action. Distinguish documented evidence from assumptions and planned evidence collection. Record the exact system and version, accountable owner, decision conditions, review date, and trigger events.

Field	Guidance	Institutional response
Decision problem and functionally equivalent comparators	Define population, service function, quality, volume, time horizon, perspective, current pathway, and credible alternatives.	
Functional unit and boundary reconciliation	Use a common service-output unit and reconcile economic and environmental boundaries across model, data, compute,	

	networks, devices, facilities, transport, maintenance, replacement, and disposition.	
Conventional health and economic consequences	Report outcomes, service effects, workforce consequences, economic cost, cash expenditure, budget incidence, and uncertainty before additional environmental treatment.	
Physical environmental and material consequences	Report energy, water, emissions, materials, waste, asset use, and critical dependencies in their native units, distinguishing average from marginal effects.	
Accounting treatment and permissible integration	Classify each additional effect as a health outcome, monetary value, or disaggregated physical result; document valuation sources and limitations.	
Residual value and resilience	Use realizable residual value net of recovery costs; record availability, repair capacity, supply-chain dependency, redundancy, and continuity consequences.	
Double-counting and burden-transfer check	Test overlap with conventional cost or outcome estimates and identify burdens shifted across organizations, populations, places, suppliers, or time periods.	
Uncertainty, rebound, and decision	Test lifetime, use, volume, marginal resource demand, induced demand, valuation, disposal, recovery, and preference reversal; state safeguards, preferred option, conditions, and review triggers.	
Evidence quality and provenance	Record source, date, geographic and temporal applicability, allocation method, uncertainty, reviewer, and evidence cut-off for every material input.	
Reporting under incomplete monetisation	Present monetized and non-monetized results transparently; retain decision-relevant physical effects when credible	

	valuation is unavailable.	
--	---------------------------	--

AIHE-E05 — Environmental, Circularity, and Disposition Dashboard

Primary chapter	15 — Circularity-Adjusted Economic Evaluation and Sustainable Value	Resource version	V1.0
Aligned chapters	13, 14, 15	Canonical folder	chapters/15/core/AIHE-E05
Purpose	Monitor acquisition, utilization, asset life, resource intensity, materials, take-back, recovery, rebound, resilience, and disposition.	Legacy aliases	AIHE-CE4; AIHE-CE5; AIHE-CE7
Status	public	Repository release	V1.0

Completion guidance

Complete the form with the people who own the evidence, workflow, budget, safeguards, and follow-up action. Distinguish documented evidence from assumptions and planned evidence collection. Record the exact system and version, accountable owner, decision conditions, review date, and trigger events.

Domain	Indicator and functional unit	Baseline and current	Threshold and owner	Balancing risk, action, and annual conclusion
Avoided or deferred acquisition				
Utilization, sharing, and useful life				
Maintenance, repair, refurbishment, and redeployment				
Energy, water, carbon, and data-storage intensity				
Virgin, recovered, and critical material use				
Verified take-back, recovery, and unverified disposition				
Residual value and recovery cost				
Rebound, safety, equity, resilience, and continuity
